Listings

The Emergency Lighting Interface – LUT-ELI-3PH is UL924 Listed as “Emergency Lighting and Power Equipment”. The interface shall be used with: Lutron GRAFIK Eye GP, XP, and LP panels; LCP128 panels; Softswitch128 panels; EcoSystem; Quantum; GRAFIK Eye QS, RadioTouch controllers, and Energi Savr Node units.

Description

The LUT-ELI-3PH unit senses the line voltage on all three phases or a single phase and controls the emergency signal to the following compatible Lutron products/systems:

- Circuit Selector for GP, LP, XP panels
- LCP/XPS controller for LCP128, and Softswitch 128 panels
- EcoSystem Bus Supply
- Quantum Bus Supply
- Grafik Eye QS unit
- RadioTouch controller
- Energi Savr Node unit

When one or more phases of normal power are lost, the LUT-ELI-3PH unit sends a signal to the affected device(s), activating the emergency mode. Any lights controlled by these devices will go to the emergency light level setting (factory set to 100% intensity). When normal power is restored, the lights will return to their previous intensities.

Important Safeguards

- Follow all national and local electrical codes and safety standards.
- Turn off power before installation.
- Line voltage input to the LUT-ELI-3PH unit must be from the NORMAL (non-essential) power source.
- Read and follow all safety instructions.
- For indoor use only.
- Equipment should be mounted in locations and at heights where it will not readily be subjected to tampering by unauthorized personnel.
- Do not use this equipment for other than intended use.
- All servicing should be performed by qualified service personnel.

System Limits (per / LUT-ELI-3PH)

- 32 circuit selectors
- 100 RadioTouch Controllers
- 32 EcoSystem bus supplies
- 32 Quantum bus supplies
- 32 Energi Savr Node units
- 32 LCP/XPS Controllers

System Ratings

- Voltage: 100-347 V~ 50/60 Hz 30 mA
- Current: 20 A maximum circuit breaker

For use with Lutron GRAFIK Eye GP, LP, and XP panels; LCP128 panels; Softswitch128 panels; EcoSystem lighting control system; Energi Savr Node units; Quantum systems; GRAFIK Eye QS units, and RadioTouch lighting controllers.

Note: This device does not provide emergency power. An Emergency (Essential) power source must be provided.
Emergency Lighting Interface LUT-ELI-3PH | Installation Guide

Mounting the Interface

1. Turn power off.
2. Wire the line voltage leads that protrude from back of LUT-ELI-3PH unit into the junction box.
3. Mount the LUT-ELI-3PH unit onto a 4 x 4-inch (102 x 102 mm) junction box (not included, but available; Lutron part number 241-496).
4. Be sure all the power wires are completely inside the junction box before tightening the mounting screws.
5. Remove front enclosure cover to expose the terminal blocks, test switch, and status LEDs.
6. Insert the NEC Class 2/PELV wires through knockouts in the LUT-ELI-3PH enclosure as shown in the diagram.
7. Connect the NEC Class 2/PELV wires to the Lutron product or system, which the LUT-ELI-3PH will be controlling. Specific wiring to these devices will be described in the following sections.
8. Reinstall front enclosure cover.

Note: Call the Lutron Technical Support Center at (800) 523-9466 for restrictions and wiring requirements for emergency fixtures (fixtures that never turn off or have a battery backup ballast in the fixture).

Installing a LUT-ELI-3PH Unit in a RadioTouch® System

Line Voltage Connections

WARNING! Danger of shock. May result in serious injury or death. DO NOT WIRE WHEN LIVE! Switch off power to all power feeds via circuit breaker or isolator before wiring or servicing the LUT-ELI-3PH unit and RadioTouch System.

Buttons and LEDs in the unit are used for troubleshooting. If wiring is exposed when accessing buttons and LEDs, the unit must be accessed by a certified electrician, following local codes.

Single-Phase Wiring

Three-Phase Wiring

Note: Provide proper short-circuit and overcurrent protection at the distribution panel. Maximum circuit breaker rating of 20 A.
Installing a LUT-ELI-3PH Unit in a
RadioTouch® System (continued)

NEC® Class 2/PELV Connections
Note: When wiring for a backup/emergency source of power, the RadioTouch Controller (models RTA-RX-F, RTA-RX-F-SC, RTA-RXSW), being used for the backup/emergency lights (Unit A and B) cannot be controlled by an occupancy sensor. Units A and B DIP switch 2 must be in the down position.

NEC Class 2/PELV Wiring to RadioTouch Controllers
One LUT-ELI-3PH can be connected in parallel with up to 100 RadioTouch Controllers.

1. Flip DIP switch 2 on the RadioTouch Controller to the down position.
2. Disconnect any occupancy sensors wired to the RadioTouch Controller.
3. Make the following connections.

<table>
<thead>
<tr>
<th>From LUT-ELI-3PH Unit</th>
<th>To RadioTouch Controller</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal 8 (+V Input)</td>
<td>Terminal 4 (24 V in), Unit A only</td>
</tr>
<tr>
<td>Terminal 7 (Circuit Common)</td>
<td>Terminal 6 (Cir Com)</td>
</tr>
<tr>
<td>Terminal 1 (Signal)</td>
<td>Terminal 2 (Occ Sig)</td>
</tr>
</tbody>
</table>

Note: Only one RadioTouch unit can have its 24 V in (number 4) terminal connected to terminal 8 (+V Input) on the LUT-ELI unit regardless of the number of wired RadioTouch units.

Test the System
Please perform the following tests to ensure proper installation.

1. Turn off one of the Normal (Non-Essential) phase(s) breaker(s) that the LUT-ELI-3PH unit is monitoring.

You should see the following:
• All lights controlled by Emergency (Essential) panel will go to FULL INTENSITY (factory set).
• PHASE ON/OFF status indicator (green) will turn OFF as the above test creates a phase failure.
• Upon turning the breaker back on, all lights should return to their previous intensity.

2. Press and hold switch SW1 on the LUT-ELI-3PH unit.

You should see the following:
• TEST LED (orange) will turn ON.
• All lights controlled by Emergency RadioTouch controller will go to FULL INTENSITY (factory set).

Note: PHASE ON/OFF status indicator (green) will not turn OFF as test #2 does not create a phase failure.
• Upon releasing switch SW1, all lights will return to their previous intensities.

Available power from this unit for daylight sensors must be derated to 15 mA.

Additional RadioTouch Controller for Backup/Emergency Light(s)

Connect the LUT-ELI-3PH Unit to the Additional RadioTouch Controller(s) for Backup/Emergency Light(s).
Installing a LUT-ELI-3PH Unit in a Panel-Based System

Line Voltage Connections

WARNING! Danger of shock. May result in serious injury or death. DO NOT WIRE WHEN LIVE! Switch off power to all power feeds via circuit breaker or isolator before wiring or servicing the LUT-ELI-3PH unit and Panel-Based System.

Buttons and LEDs in the unit are used for troubleshooting. If wiring is exposed when accessing buttons and LEDs, the unit must be accessed by a certified electrician, following local codes.

Note: Provide proper short-circuit and overcurrent protection at the distribution panel. Maximum circuit breaker rating of 20 A.

Wiring from Normal (Non-Essential) GP Panel

Wiring from Mains with GP, LP, XP, and XPS/LCP Panels
Installing a LUT-ELI-3PH Unit in a Panel-Based System (continued)

**NEC® Class 2/PELV: USA Connections**

**Notes**

- Pull NEC Class 2/PELV wiring for system communications.
- NEC Class 2/PELV wiring must be daisy-chained.
- NEC Class 2/PELV wiring must be run separately from line (mains) voltage.
- A LUT-ELI-3PH unit can be placed anywhere on the power panel link.

**Wiring Notes**

- NEC Class 2/PELV wiring link is 500 to 2000 feet (152 to 610 m), use Lutron® cable GRX-CBL-46L:
  - Two 12 AWG (2.5 mm²) for control wiring (+V and com)
  - One twisted, shielded pair 22 AWG (0.5 mm²) for data link
  - One 18 AWG (1.0 mm²) for sense line between panels.
- Lutron has also approved smaller-gauge cable from Belden®, Liberty Wire & Cable®, AlphaWire Company, and Signature Wire Corp. Ask for Lutron GRAFIK Eye® Cable.
Installing a LUT-ELI-3PH Unit in a Panel-Based System (continued)

**NEC® Class 2/PELV Panel to Panel Wiring Notes**

- **Emergency Power:** The additional 18 AWG (1.0 mm²) wire is a “sense” line from terminal 12 on the LUT-ELI-3PH. This sense line allows an Emergency (Essential) lighting panel to “sense” when Normal (Non-Essential) power is lost. If more than one emergency lighting panel needs to sense Normal (Non-Essential) from a specific LUT-ELI-3PH unit, you may have to run a dedicated wire between each LUT-ELI-3PH unit and Emergency (Essential) panel(s).
- **Shield/Drain:** Connect shielding as shown below in wiring example A:
  - Do not connect to Ground (Earth) or circuit selector.
  - Connect the bare drain wires and cut off the outside shield.

**Connections**

<table>
<thead>
<tr>
<th>LUT-ELI-3PH</th>
<th>Circuit Selector</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal 12 (Sense)</td>
<td>Terminal 5 (Sense)</td>

<td>Terminal 1 (Common)</td>
</tr>
</tbody>
</table>

**Wiring Example A**

---

**Wiring Example B**

---

Each NEC Class 2/PELV terminal can accept only two 18 AWG (1.0 mm²) wires. Two 12 AWG (2.5 mm²) conductors won’t fit. Connect as shown below in wiring example B.
Installing a LUT-ELI-3PH Unit in a Panel-Based System (continued)

Setting the Circuit Selector Normal/Emergency Switch (SW6) Position

Panels are shipped with SW6 (located at the base of each Circuit Selector) in the middle position. Terminal 5 (sense) has no affect on the circuit selector operation.

All Emergency Panels

- Move SW6 to the right Emergency (Essential) position. In this arrangement, the LUT-ELI-3PH unit will be the only unit controlling the sense line. If one or more phases go down, the LUT-ELI-3PH unit sends a signal through the sense line to Emergency (Essential) panel(s). The lights controlled by these panels will go to ‘ord’ override levels (factory set to full intensity). When normal power is restored, lights will return to their previous intensities.

Note: When in ‘ord’ override mode (factory set to full intensity), ‘ord’ will appear on value display to confirm that Emergency (Essential) position is in effect.

Test the System

Please perform the following tests to ensure proper installation.

1. Turn off one of the Normal (Non-Essential) phase(s) breaker(s) that the LUT-ELI-3PH unit is monitoring.

You should see the following:

- PHASE ON/OFF status indicator (green) will turn OFF as the above test creates a phase failure.
- Circuit selector on Emergency (Essential) panel will go to ‘ord’ override mode.
- All lights controlled by Emergency (Essential) panel will go to Full Intensity (Factory Set).
- The circuit selector in Emergency (Essential) panel will read ‘ord’ on the value display when in Emergency mode.
- All lights controlled by Normal (Non-Essential) panel will freeze at their respective intensities.

2. Press and hold switch SW1 on the LUT-ELI-3PH unit.

You should see the following:

- TEST LED (orange) will turn ON.

Note: PHASE ON/OFF status indicator (green) will not turn OFF as test #2 does not create a phase failure.
- Circuit Selector on Emergency (Essential) Panel will go to ‘ord’ override mode.
- All lights controlled by Emergency (Essential) panel will go to FULL INTENSITY (factory set).
- The circuit selector on Emergency (Essential) panel will read ‘ord’ on the value display when in Emergency Mode.
- All lights controlled by Normal (Non-essential) panel will freeze at their current intensities.
- Upon releasing switch SW1, all lights will return to their original intensities.
Installing a LUT-ELI-3PH Unit in an EcoSystem® or Quantum® System

Line Voltage and NEC® Class 2/PELV Connections

WARNING! Danger of shock. May result in serious injury or death. DO NOT WIRE WHEN LIVE! Switch off power to all power feeds via circuit breaker or isolator before wiring or servicing the LUT-ELI-3PH unit and EcoSystem lighting control system or Quantum system.

Buttons and LEDs in the unit are used for troubleshooting. If wiring is exposed when accessing buttons and LEDs, the unit must be accessed by a certified electrician, following local codes.

Note: Provide proper short-circuit and overcurrent protection at the distribution panel. Maximum circuit breaker installation of 20 A.

A Lutron PP-120H or PP-277H power pack must be used to power the LUT-ELI-3PH unit when used with a bus supply. Both the power pack and the bus supplies must be fed from a normal/emergency supply.

Wiring to EcoSystem Bus Supply

Wiring to Quantum systems
Installing a LUT-ELI-3PH Unit in a GRAFIK Eye® QS Unit

NEC® Class 2/PELV Connections

**WARNING!** Danger of shock. May result in serious injury or death. DO NOT WIRE WHEN LIVE! Switch off power to all power feeds via circuit breaker or isolator before wiring or servicing the LUT-ELI-3PH unit and GRAFIK Eye QS unit.

Buttons and LEDs in the unit are used for troubleshooting. If wiring is exposed when accessing buttons and LEDs, the unit must be accessed by a certified electrician, following local codes.

Wiring to a GRAFIK Eye QS Control Unit

Note: For 1-phase 2-wire application, connect phase A, B, and C wires on LUT-ELI-3PH together for phase sensing.

Notes
- Provide proper short-circuit and overcurrent protection at the distribution panel. Maximum circuit breaker installation of 20 A.
- When normal power loss is detected at the LUT-ELI-3PH unit, all zones in the GRAFIK Eye QS units will go to their emergency states.
- The GRAFIK Eye QS unit MUST be powered from a normal/emergency power feed.

**Notes:**

- Up to 32 QSN-4T16-S or QSN-4S16-S units can be connected to 1 LUT-ELI-3PH.

**100-347 V~**

50/60 Hz

3-phase Normal supply

See Figure #1 or Figure #2 on page 2 of this guide.
Emergency Power Mode
Setup: LCP128™/ Softswitch128® with LUT-ELI-3PH

This step is only performed if an emergency pattern* is needed when normal power is lost. All control device inputs and time clock events are ignored while in emergency power mode. This step will define if the panel has emergency circuits and how to configure the emergency pattern.

- For all the emergency (essential) lighting panels, move the emergency switches to the right position (see illustration below).
- The essential and non-essential panels must be connected by a sense line wired to terminal 5 on the link connector on the LCP128/Softswitch128 controller (see illustration below). For wiring details, see the Installation Guide.

* In this configuration, the emergency (essential) lighting panel will “sense” the normal panels’ power. When normal power is lost, the emergency panel will go to the emergency pattern (factory set to all circuits On). When normal power is restored, lighting circuits and contact closure outputs return to their previous state.

Notes:
- If UL 924 certification is required, the Lutron® Emergency Lighting Interface (LUT-ELI-3PH) may be used to meet code. The LUT-ELI-3PH unit senses the normal (non-essential) line voltage on all three phases (3PH) of normal power. When one or more phases of power are lost, the LUT-ELI-3PH unit will send a signal to terminal 5 on the LCP128/Softswitch128 controller(s). When the emergency switch is set to the right position (essential) the emergency pattern will be recalled. The LUT-ELI-3PH unit can be used with one or multiple panel systems.
- Loss of normal power can be simulated by turning off all connected normal (non-essential) panel control breakers.
- When the emergency switch is in its center position (as shipped), terminal 5 the panel does not respond to emergency.
NEC® Class 2/PELV Wiring to Fire Alarm Control Panel (FACP)

- Use only with normally open (terminals 3 and 4) or normally closed (terminals 5 and 6) dry contact closure. When the proper contact state is triggered, it must be maintained for the LUT-ELI-3PH unit to go into Emergency Mode. Once the contact is released, the LUT-ELI-3PH unit will return the GRAFIK Systems™ GP, LP, XP panels, XPS, LCP, RadioTouch® controller, EcoSystems® Bus Supply, Energi Savr Node™ unit, or Quantum® Bus Supply back to Normal operation mode.

- The LUT-ELI-3PH unit will have a factory installed jumper to provide the normally closed input signal for the supervisory circuit when a normally closed FACP input is not provided.

- Consult your Fire Alarm Control Panel’s instruction manual before connecting to the LUT-ELI-3PH unit.

- Do not connect any voltage source to the FACP inputs on the LUT-ELI-3PH unit. If voltage is provided by the FACP and connected to the LUT-ELI-3PH unit, it can damage the LUT-ELI-3PH unit.

FOR A PARTICULAR PURPOSE OR MERCHANTABILITY. LUTRON DOES NOT

LUT-ELI-3PH Installation Guide

Emergency Lighting Interface LUT-ELI-3PH

© 2010 Lutron Electronics Co., Inc.

Co., Inc.

registered trademarks and Energi Savr Node and LCP128 are trademarks of Lutron Electronics

Belden is a registered trademark of Belden, Inc., Richmond, Indiana. Liberty Wire & Cable is a

representative from a Lutron approved vendor to Customer's site, and/or coordinate a warranty

necessary, Lutron may send a Lutron Services Co. representative or coordinate the dispatch of a

call. If Lutron, in its sole discretion, determines that an on-site visit or other remedial action is

will determine what action, if any, is required under this warranty. To better enable Lutron to

by calling the Lutron Technical Support Center at (800) 523-9446. Lutron, in its sole discretion,

will, at its option, either repair the defective unit or issue a credit equal to the purchase price of the
defective unit to the Customer against the purchase price of comparable replacement part

purchased from Lutron. Replacements for the unit provided by Lutron or, at its sole discretion,
an approved vendor may be new, used, repaired, reconditioned, and/or made by a different

manufacturer.

If the unit is commissioned by Lutron or a Lutron approved third party as part of a Lutron
commissioned lighting control system, the term of this warranty will be extended, and any credits
against the cost of replacement parts will be prorated, in accordance with the warranty issued

with the commissioned system, except that the term of the unit's warranty term will be measured

from the date of its commissioning.

EXCLUSIONS AND RESTRICTIONS

This Warranty does not cover, and Lutron and its suppliers are not responsible for:

1. Damage, malfunction or inoperability diagnosed by Lutron or a Lutron approved third party as

carried onormal wear and tear, misuse, incorrect installation, neglect, accident, interference or

environmental factors, such as (a) use of incorrect line voltages, fuses or circuit breakers; (b)

failure to install, maintain and operate the unit pursuant to the operating instructions

provided by Lutron and the applicable provisions of the National Electrical Code and of the Safety

Standards of Underwriter's Laboratories; (c) use of incompatible devices or accessories; (d)

improper or insufficient ventilation; (e) unauthorized repairs or adjustments; (f) vandalism; or (g)

an act of God, such as fire, lightning, flooding, tornado, earthquake, hurricane or other problems

beyond Lutron's control.

2. On-site labor costs to diagnose issues with, and to remove, repair, replace, adjust, reinstall and/

or reprogram the unit or any of its components.

3. Equipment and parts external to the unit, including those sold or supplied by Lutron (which may

be covered by a separate warranty).

4. The cost of repairing or replacing other property that is damaged when the unit does not work

properly, even if the damage was caused by the unit.

EXCEPT AS EXPRESSLY PROVIDED IN THIS WARRANTY, THERE ARE NO EXPRESS OR

IMPLIED WARRANTIES OF ANY TYPE, INCLUDING ANY IMPLIED WARRANTIES OF

FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY. LUTRON DOES NOT

WARRANT THAT THE UNIT WILL OPERATE WITHOUT INTERRUPTION OR BE ERROR

FREE.

NO LUTRON AGENT, EMPLOYEE OR REPRESENTATIVE HAS ANY AUTHORITY TO BIND

LUTRON TO ANY AFFIRMATION, REPRESENTATION OR WARRANTY CONCERNING THE

UNIT, UNLESS AN AFFIRMATION, REPRESENTATION OR WARRANTY MADE BY AN AGENT,

EMPLOYEE OR REPRESENTATIVE IS SPECIFICALLY INCLUDED HEREIN, OR IN STANDARD

PRINTED MATERIALS PROVIDED BY LUTRON, IT DOES NOT FORM A PART OF THE BASIS

OF ANY BARGAIN BETWEEN LUTRON AND CUSTOMER AND WILL NOT IN ANY WAY

BE ENFORCEABLE BY CUSTOMER.

IN NO EVENT WILL LUTRON OR ANY OTHER PARTY BE LIABLE FOR EXEMPLARY,

CONSEQUENTIAL, INCIDENTAL OR SPECIAL DAMAGES (INCLUDING, BUT NOT

LIMITED TO, DAMAGES FOR LOSS OF PROFITS, CONFIDENTIAL OR OTHER

INFORMATION, OR PRIVACY; BUSINESS INTERRUPTION; PERSONAL INJURY;

FAILURE TO MEET ANY MANDATE, INCLUDING OF GOOD FAITH OR OF REASONABLE

CARE; NEGLIGENCE, OR ANY OTHER

PECUNIARY OR OTHER LOSS WHATSOEVER), NOR FOR ANY REPAIR WORK UNDERTAKEN

WITHOUT LUTRON'S WRITTEN CONSENT ARISING OUT OF OR IN ANY WAY RELATED

TO THE INSTALLATION, DEINSTALLATION, USE OF OR INABILITY TO USE THE UNIT

OTHERWISE UNDER OR IN CONNECTION WITH ANY PROVISION OF THIS WARRANTY,

OR ANY AGREEMENT INCORPORATING THIS WARRANTY, EVEN IN THE EVENT OF THE FAULT,

TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, BREACH OF CONTRACT OR BREACH

OF WARRANTY OF LUTRON OR ANY SUPPLIER, AND EVEN IF LUTRON OR ANY OTHER

PARTY WAS ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

NOTWITHSTANDING ANY DAMAGES THAT CUSTOMER MIGHT INCUR FOR ANY REASON

WHATSOEVER (INCLUDING, WITHOUT LIMITATION, ALL DIRECT DAMAGES AND ALL

DAMAGES LISTED ABOVE), THE ENTIRE LIABILITY OF LUTRON AND OF ALL OTHER

PARTIES UNDER THIS WARRANTY ON ANY CLAIM ARISING OUT OF OR IN

CONNECTION WITH THE MANUFACTURE, SALE, INSTALLATION, DELIVERY, USE, REPAIR,

OR REPLACEMENT OF THE UNIT, OR ANY AGREEMENT INCORPORATING THIS

WARRANTY, AND CUSTOMER'S SOLE REMEDY FOR THE FOREGOING, WILL BE LIMITED TO

THE AMOUNT PAID TO LUTRON BY CUSTOMER FOR THE UNIT. THE FOREGOING

LIMITATIONS, EXCLUSIONS AND DISCLAIMERS WILL APPLY TO THE MAXIMUM EXTENT ALLOWED

BY APPLICABLE LAW, EVEN IF ANY REMEDY FAILS ITS ESSENTIAL PURPOSE.

TO MAKE A WARRANTY CLAIM

To make a warranty claim, promptly notify Lutron within the warranty period described above

by calling the Lutron Technical Support Center at (800) 523-9446. Lutron, in its sole discretion,

will determine what action, if any, is required under this warranty. To better enable Lutron to

address a warranty claim, have the unit’s serial and model numbers available when making the

call. If Lutron, in its sole discretion, determines that an on-site visit or other remedial action is

necessary, Lutron may send a Lutron Services Co. representative or coordinate the dispatch of a

representative from a Lutron approved vendor to Customer’s site, and/or coordinate a warranty

service call between Customer and a Lutron approved vendor.
