

# Energi Savr Node Wireless Setup Kit Quick-Start Guide

## System Example

## Overview

The Energi Savr Node Wireless Setup Kit (C-ESN-SETUP) contains the following items:

- Apple iPad preloaded with Lutron Energi Savr Node setup application (also available on the Apple App Store)
- 802.11g wireless router preconfigured to communicate with both the iPad and Lutron Energi Savr Node units
- Ethernet cable for connecting wireless router to Energi Savr Node system

## Getting Started

### Step 1: Wire connections

- 1.1** Connect one end of the supplied Ethernet cable to an EcoSystem Energi Savr Node unit (QSN-1ECO-S, QSN-2ECO-S) or to an Energi Savr Node Ethernet Programming Interface (QSE-CI-AP-D).  
**NOTE:** If more than one QS link is present, these steps will need to be repeated for each QS link.
- 1.2** Connect the other end of the supplied Ethernet cable to one of the standard LAN ports on the wireless router. Do not plug the cable into the WAN (Internet) port.
- 1.3** Connect the supplied router power supply to the router and plug the power supply into a wall outlet. Verify that the wireless router is powered on by confirming that the lights on the front of the unit are on.

**NOTE:** The wireless router has already been configured to communicate with the Apple device. If you restore the router to its factory default, you will need to re-establish wireless communications between the Apple device and the router using the Apple device's WiFi connection screen.

### Step 2: Discover the system

- 2.1** Remove the Apple device from the packaging and power on the device by holding the button on the top of the unit for several seconds (until the screen becomes active). Allow some time for the device to boot up.

**NOTE:** You may find that the Apple device is not fully charged. If necessary, connect the packaged Apple device charger to a power source and then plug the Apple device into the charger.

**2.2** Verify that the Apple device has connected to the wireless router. You should see wireless signal strength indicator bars in the top of the Apple device main screen (see **Figure 1** below).

**NOTE:** *This connection may take some time to be established. You should not proceed until the indicator bars appear* (see **Figure 1** below).

**2.3** Run the Energi Savr Node (ESN) setup application by touching the icon (see **Figure 1** below).

**2.4** When the application loads, you should see the connected Energi Savr Node unit.

### Step 3: Set up the system

**NOTE:** *Only follow these instructions when setting up a system for the first time. For a system that is already operational and needs minor adjustments, **Ballast Addressing** is NOT generally required; simply navigate to existing areas and modify the settings as needed.*

**3.1** Connect to the device (for help during any part of the set-up process, use the on-screen help button as shown in **Figure 2** below)

- Select the desired Energi Savr Node unit and connect to it.
- When prompted, enter a password. You will need this password when connecting to the device to make configuration changes in the future.

Lutron Electronics Co., Inc | 7200 Suter Road | Coopersburg, PA 18036-1299 USA

**3.2** Navigate to the configuration screen

- From the **Home** screen, navigate to **System setup > Configure an ESN**. Select the desired ESN and touch **Next** to see the main configuration screen.

**3.3** Verify wiring

- Navigate to the **Verify wiring** screen and ensure that all ballasts/outputs are responding correctly to the system commands.

**3.4** Address ballasts

- If programming an EcoSystem Energi Savr Node unit (QSN-2ECO-S, QSN-1ECO-S), address the ballasts by navigating to the **Address ballasts** screen.

**3.5** Create areas

- Using the **Setup areas** screen, create new areas that correspond to the areas that you want to control in your space (e.g. hallway, office).

**3.6** Define areas

- Within the **Setup areas** screen, perform the following steps for each area that you created.
  - Navigate to the **Define lights in this area** screen and identify which lights belong to each area.
  - If programming an EcoSystem Energi Savr Node unit (QSN-2ECO-S, QSN-1ECO-S), navigate to the **Setup zones / scenes** screen to define the lighting zones that should exist in each area and assign the appropriate lights from the area to each zone as desired. Other Energi Savr Node models (such as QSN-4S16-S and QSN-4T16-S) have zones that are already pre-defined.
  - Also on the **Setup zones / scenes** screen, configure the desired area scenes by modifying the scene names as desired and specifying the zone light levels for each scene.
  - If desired, navigate to the **Setup daylighting** screen and program the daylighting behavior by assigning daylight sensors to each area, defining the daylight rows in each area, and calibrating the daylighting settings.
  - If desired, navigate to the **Setup occupancy** screen and program the occupancy behavior by assigning occupancy sensors to each area and specifying the occupied and unoccupied scenes.

**3.7** Program controls

- Return to the **Home** screen. Navigate to **System setup** to view the various device programming options.
- Program any IR sensors, QS keypads, GRAFIK Eye QS units, or other QS devices to control the Energi Savr Node unit lighting as desired using the **Program devices** and **Program IR sensors** screens.

**3.8** Program dry contact inputs

- Program any configurable dry contact inputs on the Energi Savr Node units using the **Program ESN inputs** screen.

### Step 4: Start Saving Energy with your Energi Savr Node System!
