### Mounting Guidelines

- For Indoor Use Only! NEMA, Type 1 enclosure, IP20.
- Large and extra-large panels for surface mount only.
- Panel generates heat. Mount where ambient temperature is 32-104 °F (0-40 °C).
- Relative humidity must be <90% non-condensing.
- Reinforce wall structure for panel weight and local codes; see table.
- Mount panel where audible noise is acceptable. (Internal relays click.)
- Mount panel so line (mains) voltage wiring is at least 6 feet (1.8 m) from audio or electronic equipment and associated wiring.
- Mount within 7° of true vertical.
- Consult Dimensions page for dimensions, conduit knockouts, and mounting holes and hardware.
- Install in accordance with all national and local electrical codes.

### Maximum Panel Weights

Mini	30 pounds (13.9 kg)
Standard	80 pounds (37 kg)
Large	135 pounds (61.3 kg)
Extra-Large	200 pounds (90.7 kg)

### Recommended Mounting Heights\*

#### (120/277/347 V~ Softswitch128 systems)

Mini	45 in. (1143 mm)
Standard	25 in. (635 mm)
Large	10 in. (254 mm)
Extra-Large	7 in. (178 mm)

\*Measure from floor to bottom of panel.  
Provides optimal viewing height for controller.

### Surface Mounting

- Lutron recommends using 1/4 in. (6 mm) mounting bolts (maximum size accepted by keyholes).
- Allow room for cover. Leave 1 1/2 in. (38 mm) clearance to each side of panel.

### Recess Mounting

- Mount panel between flush and 1/8 in. (3 mm) below finished wall surface.
- Allow room for cover. Leave 1 1/2 in. (38 mm) clearance to each side of panel.

## Panel Mounting (continued)

### Rough-In Panel Interior Mounting (Rough-in Panels ONLY) (120/277/347 V $\sim$ only)

#### Mounting for SINT or XINT Plate:

- Insert interior into TUB.
- Rest interior on bottom of TUB.
- Press interior flat into back of TUB.
- Insert 3 screws (provided) as shown into interior to secure to TUB.
- All mounting guidelines apply (see previous page).

TUB 48 Mounting for  
SINT20 through SINT48  
and XINT20 through XINT 48

TUB 16 Mounting for  
SINT8 through SINT16  
and XINT4 through XINT16

# Wiring

## Feed-Through Panel: Feed and Load Wiring

- Use a trough when the switching panel is far away from the distribution panel. Splice neutrals in trough.
- Wire the switching panel similar to a lighting distribution panel. Run feed and load wiring.
- Use the switching panel to provide temporary lighting by leaving the bypass jumpers in place. (See page 16 for more details.)

### Typical load circuit

### Wire Sizes

- Power Feed (Hot/Live): #14-#10 AWG (2.5-4.0 mm<sup>2</sup>)
- Switched Hot/Live: #14-#10 AWG (2.5-4.0 mm<sup>2</sup>)

### Control Circuit Power:

- Supplies power for internal operation.
- Requires dedicated feed with same voltage and phase as panel.
- Must be 1/4" (6 mm) away from PELV (Class 2: USA) control wiring harness.
- Panel voltage (see pages 2-3) indicates feed voltage.
- For 230 V $\sim$  and 240 V $\sim$  panels, "Hot" is referred to as "Live". Therefore, terminals will be labeled L and SL.

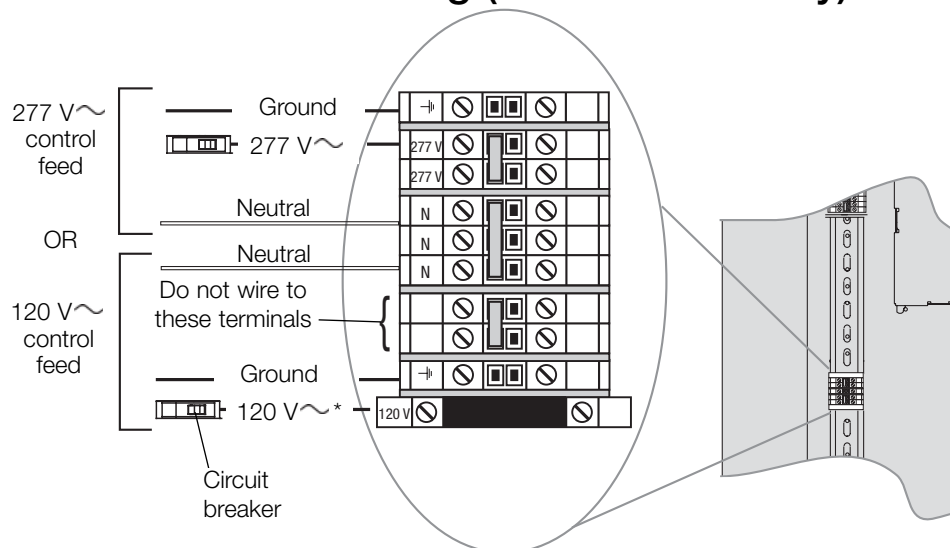

## Dual-Voltage Panel: Feed and Load Wiring (120/277 V $\sim$ only)

Wire to either the 120 V $\sim$  or the 277 V $\sim$  control feed terminals, not both. The terminals for the unused voltage will remain empty.

### \*Note:

120 V $\sim$  Hot/Live terminal is protected by an internal fuse in case 277 V $\sim$  is mistakenly applied. A spare fuse is also supplied in the panel terminal block.

- Run feed and load wiring. No other wiring or assembly required.

The switching panel can provide temporary lighting:

- Wire all loads.
- Leave the bypass jumpers in place.
- Use branch circuit breakers at the distribution panel to switch lights on and off.

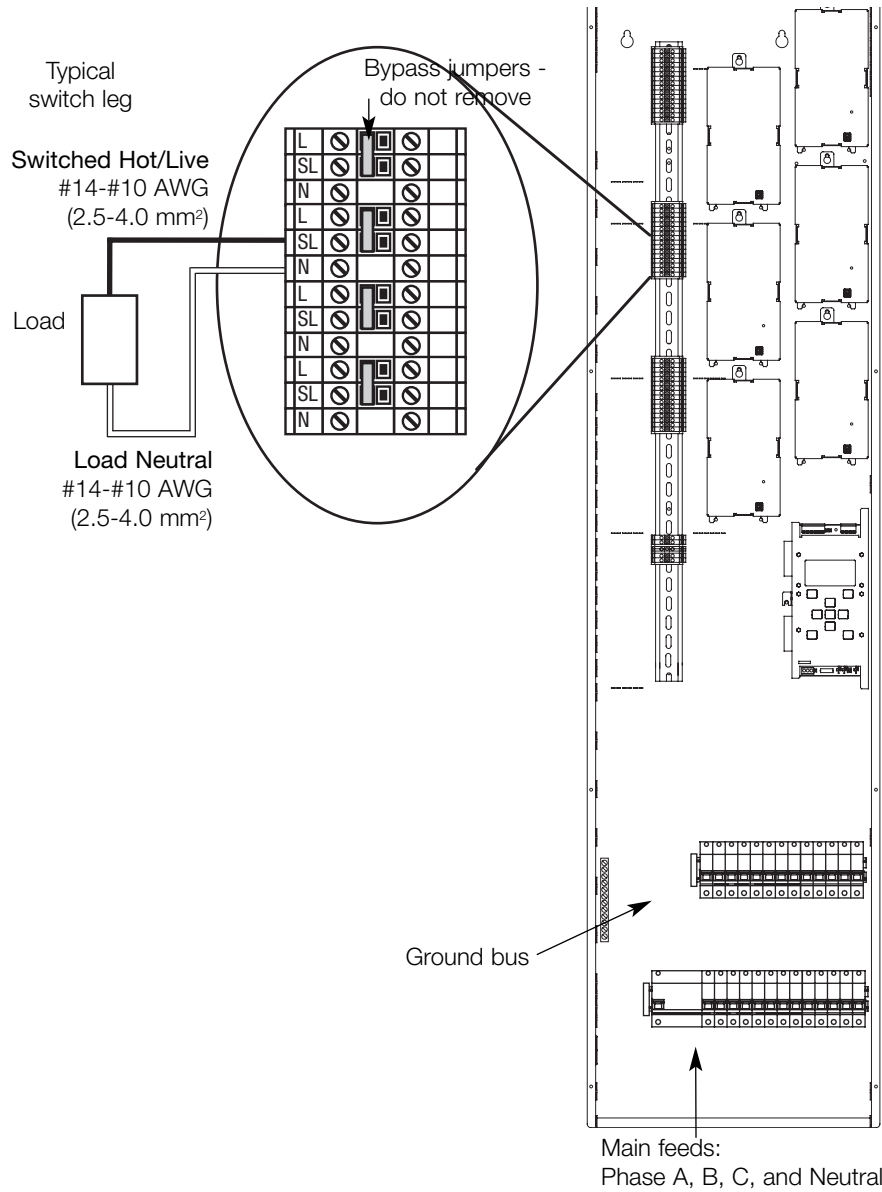

### Feed Wiring

#### Load Circuit Wiring

Terminal blocks accept one #14-#10 AWG (2.5-4.0 mm<sup>2</sup>) wire. Preferred entry is from the top of the panel.

# Temporary Lighting

You do not need to install a temporary distribution panel. Connect load wires into the appropriate terminal blocks. Each input breaker can supply power to a load while the bypass jumper protects the module from load faults.

**Warning!** Verify that the panel is fed from the correct voltage. A feed miswire or loss of a feed neutral can cause over-voltage damage to the equipment. Do NOT remove bypass jumpers at this point--they protect the modules from load faults.

Bypass jumper protects the switch module from load faults.

## Activate Loads in Bypass

### A. Complete load wiring.

### B. Check that the bypass jumpers are in place.

These jumpers protect from load faults and must be used to check load wiring when it is installed or modified.

**Warning!** Verify that the panel is fed from the correct voltage. A feed miswire or loss of a feed neutral can cause damage to the equipment.

### C. Turn a load's input circuit breaker ON.

The load should energize, the breaker should not trip, and total load current must be within the circuit breaker's limit and less than or equivalent to 16 A.

### D. Repeat step C for each circuit with completed load wiring.

# Complete Installation

You have completed your panel installation.

**For Onsite Factory Commissioning**, call Lutron Technical Support and select Startup to schedule a field service visit. Allow for 10 working days between day of call and scheduled visit.

**If you purchased Telephone Startup** (*Softswitch128/XPS* only), stop here and complete the Control Location, Panel, and Control Station Tables that are located in the back of the *Setup and Operation Manual*. Once the tables are complete, call Lutron Technical Support and select Startup. Please call 24 hours prior to desired system startup.

**In the U.S., Canada, and the Caribbean: 1.800.523.9466**

**In Mexico: +1.888.235.2910**

**In Europe: +44.207.702.0657**

## Remove Bypass Jumpers

- A. After all load wiring has been checked, turn circuit breakers OFF.
- B. Remove and store the bypass jumpers for possible future use.
- C. Turn circuit breakers ON.

**Caution!** Reuse the bypass jumpers whenever work is being done on a load. Damage caused by short-circuits and miswiring is not covered by the product warranty.

Panel installation, control station wiring, and load activation are now complete.

Next Step: Refer to the *Setup and Operation Manual* to set up the functions and operation of the panel.
