Using a Sentry Switch® switch with Softswitch128™

Overview

A Sentry Switch switch may be used with a Softswitch128 system to provide local, line-voltage override control of lighting. During normal operation, the switch can be used to turn lighting on and off. When the Softswitch128 time clock turns lighting off in Afterhours mode, the switch automatically resets itself to the off position. A user may then manually override Afterhours mode, turning the lights back on using the Sentry Switch switch.

Wiring

Programming Softswitch128 to use a Sentry Switch switch

Using the Softswitch128 Controller, program Afterhours mode to use a Sentry Switch switch:

- 1) From the Main Menu, select "Time Clock Setup".
- 2) Select "Add Event", then select "Add Weekly Event" or "Add Holiday Event".
- 3) Select the Day to which you would like to add the event.
- 4) Select a "Fixed" time or a time relative to "Sunset" or "Sunrise".
- 5) Select "Afterhours Start" as the action.
- 6) A list of circuits will appear. For each circuit that is connected to a Sentry Switch switch, change its setting to "5 sec. Off". This setting will cause that circuit's relay to turn off for 5 seconds, triggering the Sentry Switch switch to reset itself to the off position. The relay will then turn back on, however the lights will remain off until the Sentry Switch switch is manually switched to the on position.
- 7) When finished programming, select "Done" to save changes and exit.

Important Note

The Sentry Switch switch is neither manufactured nor provided by Lutron. Its performance cannot be guaranteed by Lutron.
