Cleaning Recommendations for Lutron Products

Sources: cdc.gov and epa.gov

**Purpose:**

This guidance provides recommendations on the cleaning of Lutron products such as dimmers, switches, keypads and faceplates.

- If Lutron product surfaces are dirty, they should be cleaned using a damp cloth with a mild soap and water prior to disinfection.
  - Never spray any fluids or chemicals on electrical devices.
- For additional cleaning of Lutron products, use hydrogen peroxide based disinfectants. Commercially available hydrogen peroxide disinfectants can be found on the EPA’s website. Navigate to the EPA’s [List N: Disinfectants for Use Against SARS-CoV-2](https://www.epa.gov/covid-19/list-n-disinfectants-use-against-sars-cov-2) and search for “Hydrogen Peroxide” in the search bar above the table. Application methods can be in the form of a single-use wipe or liquid solutions can be used to dampen a clean cloth (single use) and used to wipe down the surface of the Lutron product. Follow the disinfectant manufacturer’s guidelines for concentrations levels and contact time. Labels on disinfectants contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.
  - Never spray any fluids or chemicals on electrical devices.
- Use of disinfectants with other active chemicals such as bleach, isopropyl alcohol, ethanol, and others may result in degraded plastics or icons on Lutron products.
- See the CDC.gov website for details on cleaning methods and frequency based on the situation.
