

And now for an even simpler way  
to save energy...

# Introducing the new Radio Powr Savr™ and Rania® Wireless RF Switch

Saving energy could not be simpler thanks to Lutron's new Radio Powr Savr and Rania Wireless RF Switch. The wireless sensor controls lights based on whether a room is occupied or not – to maximise energy savings. Also, because there are no wires to pull for the switch and no neutral wire is required, the sensor and switch combination is ideal for retrofitting. In fact, it can all be installed in minutes.

## Quick and simple to install.

Radio Powr Savr is ideal for all kinds of applications, including conference rooms, offices, classrooms, storage areas, hallways, commercial bathroom facilities.

But wherever the Radio Powr Savr has to be installed, it's a simple task...the sensor is easy to mount and reposition on the ceiling...setting up the unit is straightforward, using the buttons on the front...and the lens lights up to confirm the sensor's coverage when you test it.

Simple to install, the Radio Powr Savr is also effective and flexible. Its exclusive XCT™ technology detects fine movements, and it can communicate with up to 10 switches. You can add up to three sensors for every switch – to ensure total coverage of the illuminated area.

## Switch and sensor in one package.

Combine the Radio Powr Savr with Lutron's multi-location switch, the Rania Wireless RF Switch, in one easily retrofitted package.

The switch is rated for 220–240 V, 5 AX, 25 W minimum load, incandescent/halogen, fluorescent, CFL, electronic and magnetic low-voltage, motor loads (4 A).

The Rania Wireless RF Switch is available in a wide choice of colours and finishes to complement the decor of any commercial premises.
