Flexible control every step of the way

A simple wireless lighting control solution for new and existing commercial buildings.
How can you make every office, school, or university campus an efficient, comfortable and productive place to work or learn?

**Vive is the answer.**

Vive by Lutron is a simple, scalable, wireless control that can be installed in a single space or throughout an entire campus. It’s designed to meet today’s energy codes, be used in new construction or retrofit situations, and meet your budgetary needs.

And with a wide family of products – including sensors, remotes, load controls, and an available software management suite – Vive provides the flexibility to select the products you want and handle any on-site challenges with ease.
Scalable solutions — start small and grow

Vive wireless solutions offer a multi-strategy approach that accommodates your budget and performance needs now, and for the future of your building.

1. Single office space
   Start by adding control in a single space and expand as budgets and occupant schedules allow.

2. Single floor
   Expand to new areas or an entire floor at any time without reprogramming or replacing existing equipment.

3. Multiple floors
   Duplicate the success of one floor across other floors as your business expands or tenants change. Control can be independent on each floor, or linked via Vive wireless hubs.

4. Entire building
   Vive offers seamless integration to other building management systems to control every light in your building.

Energy-saving control strategies

Combine lighting control strategies to maximize efficiency

What is the savings opportunity?
Lutron solutions can save 60%+ or more lighting energy.

**Occupancy/vacancy sensing** turns lights on when occupants are in a space and off when they vacate the space.

**Daylight harvesting** dims electric lights when daylight is available to light the space.

**Scheduling** provides pre-programmed changes in light levels based on time of day.

**Demand response** automatically reduces lighting loads during peak electricity usage times.

**Plug load control** automatically turns off loads after occupants leave a space.

**High-end trim** sets the maximum light level based on customer requirements in each space.

**Personal dimming control** gives occupants the ability to adjust the light level.

**HVAC integration** controls heating, ventilation, and air conditioning systems through contact closure, or BACnet protocol.

**System Optimization Service** from Lutron identifies important lighting control adjustments to save additional energy and create a more productive work environment on an ongoing basis.

Flexible, wireless controls and sensors for simple, code-compliant design

Add wireless hubs for centralized control and integration (optional)

Vive wireless hub

Demand response

BACnet integration

Communication protocols

Simple-to-use software

Vive software

Transform existing buildings with wireless lighting controls

Vive wireless hub

Communicate via RF to control components

Communicate via WiFi to smart devices

Communicate via wired Ethernet to Vive hub

Flexible, wireless controls and sensors for simple, code-compliant design

Remotes

Occupancy and daylight sensors

Or

Lighting controllers

Plug load controllers

Integrations fixture control and sensing
Selecting and installing wireless controls is easy

Area Control

Step 1

Control your loads
- Select the controller appropriate for the loads on your job
- Options available for:
  - switching, 0-10 V, phase dimming, Ecosystem, contact closure
- Simply wire one load controller for each group of lights you want to control together

Step 2

Control your lights where you need to
- Wireless devices can be mounted to any surface with no wiring needed
- Controls communicate wirelessly to the controls in the ceiling
- 10 year battery life

Step 3

Add sensors to your job
- Occupancy/vacancy sensors turn lights on and/or off for convenience and energy savings
- Wireless devices can be mounted to any surface with no wiring needed
- Controls communicate wirelessly to the controls in the ceiling
- 10 year battery life
Selecting and installing wireless controls is easy

**Area Control**

**Step 4**

Add daylight harvesting to meet code and save energy
- Save energy by dimming the lights when natural light is available
- Wireless devices can be mounted to any surface with no wiring needed
- 10 year battery life

**Step 5**

System software and control (optional)
- Timeclock
- Demand response
- BACnet
- Energy and Occupancy information

See easy programming setup
pages 16 – 17
- Save energy by dimming the lights when natural light is available
Selecting and installing wireless controls is easy

Individual Fixture Control

Step 1

Simply count the fixtures—the technology is built in

- Visit lutron.com/hpfl for a list of fixtures that come with Vive wireless technology built in
- Fixtures are shipped with occupancy, vacancy and daylight sensing already installed

Step 2

Control your lights where you need to

- Wireless devices can be mounted to any surface with no wiring needed
- Controls communicate wirelessly to the controls in the ceiling
- 10 year battery life

Step 3

System software and control

- Timeclock
- Demand response
- BACnet
- Energy and Occupancy information

See easy system programming on pages 16 & 17

Access to tools and resources is at your fingertips.

Exclusive access and quick answers keep your project moving.

**Designer+ for Vive**

Lutron Designer+ for Vive is an intuitive, easy-to-use software tool that allows you to design a Lutron Vive lighting control system with visual "drag and drop" layout and connections. It also allows you to generate comprehensive system design documentation, including bills of materials, one-line diagrams, and sequence of operations. For access please contact myLutronsupport@lutron.com.

**Vive videos**

Get access to Lutron Vive videos 24/7. Step-by-step setup, installation, and programming help whenever you need it. lutron.com/viveresources.

**Vive training**

Visit lutron.com/UCIOntline — Sign up for free, online training modules with practice exercises that walk you through the Vive system.

---

**Summary of code requirements for lighting control**

For specific commercial building code lighting requirements in your state, please visit lutron.com/energycodes.

**App guides to help you meet codes**

Codes can often be complicated and difficult to navigate. We have commercial application guides that include examples of different spaces and corresponding Lutron products for those spaces. Guides show you how you can use Lutron solutions to meet or exceed major energy code requirements.

Available online at lutron.com/appguides

**Vive wireless specification typicals**

Specifying wireless lighting control reduces design time and allows flexibility for changes during the project without the need to redesign. Vive Wireless Specification Typicals allow for quick and easy design of many applications. Simply copy and paste the typicals into drawing packages for complete design, layout, and BOM information.

Available online at lutron.com/viveresources

**Energy code quick reference guides**

Get the lighting and receptacle control requirements along with suggested functionality to meet the latest versions of ASHRAE 90.1, IECC, and Title 24 all on one page.

Available online at lutron.com/viveresources
Easy system programming

Simple setup and programming options with the Vive wireless hub

**Mobile phone setup**
Using Vive software on any smart device you can wirelessly connect system controls and program system settings—no ladder required. Lutron’s patent-pending RF signal strength detection automatically finds nearby devices, making job setup faster.

1. **Press and hold on wireless device**

2. **Automatic fixture identification**
Lutron patent-pending technology automatically finds and sorts the wireless devices closest to the control.

**For systems without a Vive wireless hub**

**Push-button set up**
Use simple button-press programming to select and associate wireless devices—it’s as easy as setting a station on your car radio.

1. **Wireless dimmer**

2. **Occupancy sensor**

**Press and hold for 6 seconds**

It works! Sensor now talks to the wireless dimmer.
Save energy and improve building performance

Energy reporting
Quickly view and display energy-usage information to drive decision making and demonstrate savings.

Load shed Open ADR Compatible
Easily set lighting reduction levels that automatically respond during peak electricity usage times.

Schedules
Use a 365-day calendar to automatically adjust lights based on time of day, including single day and holiday events.

Light Control
Directly adjust the light levels.

 Seamlessly integrate with your building system
The BACnet/IP protocol is the primary means of integration. BACnet is embedded or native in the Vive wireless hub, which means no external interfaces or gateways are required in order to communicate with other systems.
Vive Vue software

Vive Vue software now provides the ability to tie multiple Vive hubs together in one software interface. Built with the simple, scalable, wireless building blocks of the Vive Wireless system, Vive Vue software now delivers the advanced intelligence necessary for today’s smart buildings and the IoT. A smart building is now easier than ever to achieve.

Intuitive control

View status, control lights, and optimize your building quickly and efficiently with a graphical floorplan.

Optimize your space

Improve building layout based on actual occupancy and usage information. With space utilization reports, you can quickly identify over-used and under-used spaces to improve building efficiency without expanding the building footprint.

Save energy purposefully

Energy reports allow you to view and monitor your energy savings. With trending energy information over time, and easily customizable reports, Vive Vue software helps you demonstrate the energy-saving advantages of wireless lighting control.
Manage data and operations for multiple Lutron lighting and shade control solutions

- A single data and management platform for your connected buildings
- The system interface delivers a simple, consistent user experience from any PC or tablet
- Open, easy integration with BACnet and web APIs leverages the IoT to enhance smart-building performance

Enterprise Vue – Connected campus
Lutron system security

We build security into the product and the process from conception to installation, and through the lifetime of the system.

Everything we do is backed by Lutron’s first, and guiding, principle — Take Care of the Customer with Superior Goods and Services. Every product, every system, and every solution is designed, manufactured and tested to work as expected.

Security by design

When building any new system, Lutron utilizes a dedicated security team to ensure best practices are implemented. Security is built in. It is not an afterthought or add-on.

Examples of security features designed into Vive include:

1. Isolated wired and wireless architecture which strictly limits the possibility of the Vive Wi-Fi or Clear Connect being used to access the corporate network to gain confidential information
2. A distributed security architecture — each hub has its own unique keys
3. NIST-recommended best practices for securing passwords, including salting and use of SCrypt
4. AES 128-bit encryption for network communications
5. HTTPS (TLS 1.2) protocol for securing connections to the hub over the wired network
6. WPA2 technology for securing connections to the hub over the Wi-Fi network

Third-party validation

Security is complicated. Lutron has a dedicated team of internal experts, but we also leverage external experts to double- and triple-check our work.

1. Multiple external experts engaged during design process
2. Third-party penetration testing to identify and fix potential vulnerabilities before they reach the field

Continuous monitoring and improvements

Security is a constantly moving target. Lutron uses a dedicated security team to continuously monitor the market for potential threats and, when needed, send out security patches to update installed systems.

Ongoing support

Lutron has the resources you need to answer questions about security when they arise.

1. IT deployment guides
2. Guidance from our world class 24/7 technical support organization with IT expertise throughout the product lifecycle

Lutron reliability

Clear Connect wireless technology

All Lutron wireless products utilize Lutron patented Clear Connect wireless technology, which operates in an uncongested radio frequency band. The result is ultra-reliable communication and smooth dimming performance with no flicker or delay. Other devices will not interfere with the Lutron lighting control system.

Clear Connect

434 MHz: Lutron Clear Connect wireless technology

Lutron devices operate in an uncongested frequency band, providing ultra-reliable operation.

Other frequency bands

2.4 GHz: Cordless phones | Bluetooth devices | Wireless security cameras

Other devices operate in congested frequency bands, creating a high potential for wireless interference.
Vive Installation
Suncrest Bank — Visalia, California
Vive Wireless hub

Features and benefits

- Communicates with controls on a floor using Lutron wireless Clear Connect technology (range radius of 71 ft [22 m])
- Distributed system architecture
  - Pico remote controls and sensors communicate directly with the load devices they control and must be located within 30 ft (9 m) of the device with which they are associated
- Supports timeclock events based on both sunrise and sunset or fixed time-of-day
- Two contact closure inputs to enable load shed from other devices for Title 24 compliance and utility integration
- Open ADR 2.0b compatible for integration with utilities for demand response/loadshed and code compliance
- Each hub provides an individual dashboard for its coverage area and allows you to link to other hub dashboards from the mobile application

How it works

All wireless devices to be associated to the Vive wireless hub must be within 71 ft (22 m) of the Vive wireless hub and must be on the same floor as the Vive wireless hub.

Product options

Vive wireless hub models

Starter (up to 75 devices)

- HJS-0-FM Flush mount

Standard

- HJS-1-FM Flush mount
- HJS-1-SM Surface mount
- H-MOUNT-SM Surface-mount installation adapter

Premium (with BACnet)

- HJS-2-FM Flush mount
- HJS-2-SM Surface mount
- HJS-UPDATE Software upgrade license to add BACnet
- HJS-DEVICES Software upgrade license expands device limit to 700 devices

Note:

A corporate Wi-Fi network can interfere with the Wi-Fi on the Vive wireless hub. Where a corporate Wi-Fi network exists, it is recommended to do one of the following: 1) Connect to the Vive wireless hub and change the Wi-Fi channel to one that isn’t used by the corporate network or 2) Connect the Vive wireless hub to the corporate network using the Ethernet connection on the hub, and disable the hub’s Wi-Fi.

Note: A minimum distance of 10 ft (3 m) between Vive wireless hubs on the same floor is required.

Note: Vive wireless hub must be mounted a minimum of 10 ft (3 m) from a Wi-Fi router or access point.

Note: Pico remote controls and sensors must be within 30 ft (9 m) of the load device they are controlling.
How to design and specify

**One relay module**
For each controlled lighting zone in the space

**Control**
Select appropriate model based on the size of the connected load

- **16 A:**
  - 1920 W or ½ HP @ 120 V
  - 4432 W or 1 1/2 HP @ 277 V

- **5 A:**
  - 600 W or ¼ HP @ 120 V
  - 1385 W or ½ HP @ 277 V

**Contact closure output**
For sending occupancy information to third-party equipment such as HVAC systems

**Input**
120/277 V

**Product options**

**16 A models**
- RMJS-16R-DV-B
- RMJS-16RCCO1-DV-B One contact closure output

**5 A models**
- RMJS-5R-DV-B
- RMJS-5RCCO1-DV-B One contact closure output

---

How to design and specify

**One single zone controller**
For each EcoSystem/DALI lighting zone in the space

**Control**
EcoSystem/DALI: up to 32 drivers per controller

- Multiple drivers/balasts connected to control module will always work together as single zone

**Input**
120/277 V

**Product options**

EcoSystem single zone
- RMJS-ECO32-SZ
Load controllers: J-box mounted switches and dimmers

How to design and specify

- **One dimming module with 0-10V control**
  For each controlled 0-10V lighting zone in the space
- **Control**
  - **8A**: 0-10V controlled fixtures and switches compatible with third-party 0-10V fluorescent ballasts, LED drivers, and fixtures
- **Input**: 120/277V
- **0-10V Link**: Communicates with up to 60 mA of fixtures

Product options

**8A models with 0-10V control**

- **RMJS-8T-DV-B**
- **RMJS-8TN-DV-B**

How it works

Two versions of the PowPak 0-10V are available that optimize for different wiring practices. The -8T model has a connector on the back of the box which is optimized for Class 2 wiring outside of the standard conduit. The -8TN model has the 0-10V wires coming out of the threaded end, optimized for wiring inside a junction box and used for when the 0-10V wires are run in the cable or conduit with the Class 1 wiring. Both versions can have the 0-10V control wires be installed using NEC® Class 1 or Class 2 wiring methods.

Wiring Schematic

*NOTE:* The control module mounts to the exterior of a U.S.-style junction box.
How to design and specify

- **One contact closure output module**
  For each additional contact closure output you require

### Product options

**Standard**

| RMJS-CCO1-24-B | Contact closure output |

**Note:** If using a relay module with the contact closure output, you do not need to add a contact closure output module unless a second contact closure output is needed.

---

**How it works**

In response to information received from a Radio Powr Savr occupancy/vacancy sensor, the PowPak contact closure output module communicates room occupancy to the VAV terminal unit. By not heating or cooling an unoccupied room, the electricity consumed by the HVAC system can be reduced.
How to design and specify

- One relay module
  For each 20 A receptacle circuit you want to control
- Input 120/277 V

Product options

<table>
<thead>
<tr>
<th>20A models</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RMJS-20R-DV-B</td>
<td>General purpose switch 120-277 V receptacles</td>
</tr>
<tr>
<td>RMJS-20RCC01-DV-B</td>
<td>General purpose switch 20A, 120-277 V receptacles with one contact closure output</td>
</tr>
</tbody>
</table>

How it works

Plug loads, such as task lighting, computer monitors, and printers, account for greater than 5% of commercial electricity usage. Many energy codes now require control of receptacles for compliance.

The occupancy/vacancy sensor wirelessly communicates room occupancy to the relay module. Based on the occupancy status received, the relay module switches the power to the receptacles on or off, reducing the amount of energy consumed.
How to design and specify

- **One wireless receptacle**
  For each receptacle circuit you want to control
  One wireless receptacle can also control standard receptacles wired downstream
- **Input**: 120V

### Product options

<td>Duplex (dual switching; single pole/downstream)</td>
</tr>
</tbody>
</table>

### How it works

Plug loads, such as task lighting, computer monitors, and printers, account for greater than 5% of commercial electricity usage. Many energy codes now require control of receptacles for compliance.

The occupancy/vacancy sensor wirelessly communicates room occupancy to the wireless receptacle. Based on the occupancy status received, the wireless receptacle switches the power on or off, reducing the amount of energy consumed. The wireless receptacle will control normal receptacles downstream.

</tbody>
</table>

**How it works**

Install the fixture control directly to a fixture or on a junction box nearest to the fixture. Install the sensor on the ceiling near the fixture to optimize coverage in the desired area.

**Note:** Avoid mounting the fixture sensor in direct sunlight or in the light which is cast from the fixture.

---

**Fixture sensor coverage diagrams**

  - Ceiling: 12.0 ft (3.65 m)
  - Floor: 12.0 ft (3.65 m)
How to design and specify

- One UL 924 PowPak module per lighting zone or fixture, depending on model

  **Relay module control:**
  - 16 A: 1920 W or 1/2 HP @ 120 V
  - 4432 W or 1/2 HP @ 277 V

  **0-10 V module control:**
  - 8 A: 0-10 V controlled fixtures and switches compatible with third-party 0-10 V fluorescent ballasts, LED drivers, and fixtures
  - 0-10 V link: Communicates with up to 60 mA of fixtures

  **Fixture control:**
  - 1 A of load or up to 3 drivers and ballasts
  - Input (all models) 120/277 V

Product options

- Relay
  - RMJS-16R-DV-B-EM
- 0-10 V
  - RMJS-8T-DV-B-EM
- Fixtures
  - FCJS-010-EM
  - FCJS-ECO-EM

How it works

During normal power conditions, the UL 924 rated PowPak modules can dim loads and respond to local button presses, Pico wireless controls, and occupancy/daylight sensors.

If utility power fails and the emergency PowPak loses power for greater than 250 msec, the emergency generator back-up source activates and the automatic transfer switch senses loss of normal power and switches to emergency power.

The emergency PowPak regains power and automatically goes into emergency mode (full output, relay closed and 0-10 V signal goes to 10.0 V) for 90 minutes. All local buttons, Pico wireless controls and occupancy/daylight sensors will not respond.

When normal power is restored to the Vive hub and emergency PowPak, the emergency PowPak will return to the previous light level within 2 minutes of normal power being restored. It will again accept local button control, input from Pico wireless controls, and occupancy/daylight sensors.

System Wiring Diagram (Vive Hub with Emergency PowPak)

### How to design and specify

- Select one switch per lighting zone
- Select appropriate model based on the size of the connected load
  - **6 A**: 600 W lighting @ 120 V
  - **8 A**: 960 W lighting @ 120 V or 2216 W @ 277 V
- If existing switch does not have a neutral, choose the model available for 120/277 V with no neutral required
- Select from up to 27 colors to complement the décor*
- Add an additional Pico remote for rooms with multiple switches for a single zone

#### Product options

**Dual Voltage No Neutral switches**

- **MRF2S-8S-DV-XX**: 8 A lighting, 1/10 HP fan @ 120 V only, 120-277 V, no neutral

**120 V Neutral required switches**

- **MRF2S-6ANS-XX**: 6 A lighting, 1/10 HP fan, 120 V only
- **MRF2-8ANS-120-XX**: 8 A lighting, 1/4 HP fan, 120 V only

* (XX in the model number represents color/finish code; use WH for White; please visit lutron.com for other color choices.)

### Maestro wireless switches

**Dimensions**

- **W**: 2.94” (75 mm)
- **H**: 4.69” (119 mm)
- **D**: 1.44” (36 mm)

### Maestro wireless dimmers

**Dimensions**

- **W**: 2.94” (75 mm)
- **H**: 4.69” (119 mm)
- **D**: 1.44” (36 mm)

**How to design and specify**

- Select one wireless dimmer per lighting zone
- Select appropriate model based on the size and type of existing load
- Most models do not require a neutral
- Select from up to 27 colors to complement the décor*
- Add an accessory dimmer or a Pico wireless remote for rooms with multiple switches for a single zone
- Gray models (-GR) are plenum rated for mounting in ceiling applications

#### Product options

**Maestro Wireless dimmers**

- **MRF2S-6CL-XX**: 150 W dimmable CFL/LED, 600 W incandescent/halogen, 600 VA MLV, 120 V, no neutral
- **MRF2S-6ELV-XX**: 600 W ELV, 120 V
- **MRF2S-6ND-120-XX**: 600 W/VA incandescent/halogen/MLV, 120 V, 1-8 Lutron LTE drivers, 350 W max
- **MA-R-XX**: Accessory dimmer for multi-location lighting controls, 120 V

* (XX in the model number represents color/finish code; use WH for White; please visit lutron.com for other color choices.)
Features and benefits

- Easy to install; directly replaces an existing control in a wallbox
- Combines occupancy sensing, manual control, and system connectivity in one piece of hardware
- Easily add additional wall controls and sensors without running any new wires
- Connect to a Vive wireless hub for system features such as time-clock, energy reporting, and demand response/load shed
- Lutron XCT technology for superior sensitivity prevents false ons and false offs

How to design and specify

- Select one dimmer or switch per lighting zone
- Select appropriate model based on type of load:
  - 120 – 277 V ~ 8 A Electronic fluorescent ballast or LED drivers
  - Controls up to 50mA of 0-10V fixtures, sink only (0-10V Dimmer version)
  - Neutral required
- Add additional Pico remotes for rooms with multiple switches for a single zone
- Add additional wireless occupancy and/or daylight sensors for additional coverage area and functionality

Product options

Standard

- MRF2S-8SD010-XX 0-10V Wallbox Dimmer Sensor
- MRF2S-8SS-XX Wallbox Sensor Switch

Sensor coverage diagrams

(XX in the model number represents color/finish code)
### How to design and specify

- Select one 2-button Pico wireless remote to add a location with ON/OFF control.
- Select one 3-button Pico wireless remote to add a location with ON/OFF control and one preset.
- Select one 2-button with raise/lower Pico wireless remote to add a location with ON/OFF and BRIGHTEN/DIM control.
- Select one 3-button with raise/lower Pico wireless remote to add a location with ON/OFF, BRIGHTEN/DIM control and one preset.
- Select whether a nightlight is needed (2-button and 3-button with raise/lower only).

**Note:** Spaces with a PowPak relay or dimming module will not have a local control in the room unless a Pico is added.

### How it works

- No wires—put it where it’s most accessible.
- Pedestal mount for tabletop use.
- Surface mount anywhere with Claro wallplate.
- 10-year battery life.

How to design and specify

- The Pico wireless remote is a flexible and easy-to-use device that allows the user to control Lutron wireless load-control devices from anywhere in the space. This battery-operated control requires no external power or communication wiring.

Product options

4-button remotes

- PJ2-4B-GWH-L21P: 2-group control
- PJ2-4B-GWH-L01: Zone control
- PJ2-4B-GWH-L31: Scene control

- Custom-engraved models for Zone control keypads (-L01, -S01) and Scene control keypads (-L31, -S31) are available but require a different set of button marking codes when ordering.

Note: 2-Group (-L21, -S21, -LS21) controls are not offered with the custom engraving option.

How to design and specify

- Select one Pico pedestal for each tabletop location based on the number of Pico remotes at each location.

Product options

Tabletop accessories

- L-PED1-WH: pedestal for one Pico remote
- L-PED2-WH: pedestal for two Pico remotes
- L-PED3-WH: pedestal for three Pico remotes
- L-PED4-WH: pedestal for four Pico remotes

Product options

Wall-mount accessories

- PICO-WBX-ADAPT: Pico wallbox adapter
- CW-1-WH: Claro 1-gang wallplate
- CW-2-WH: Claro 2-gang wallplate
- CW-3-WH: Claro 3-gang wallplate
- CW-4-WH: Claro 4-gang wallplate

Dimensions

<table>
<thead>
<tr>
<th>Pico remote</th>
<th>W: 2.96“ (75mm)</th>
<th>H: 4.69“ (119mm)</th>
<th>D: 1.44“ (38mm)</th>
</tr>
</thead>
</table>

Tabletop accessories

- Pico remote
- Accessories
- 4-button
- 2-group zone control
- 4-button scene control

Dimensions

</tbody>
</table>
How to design and specify

- A single occupancy sensor can communicate to all control devices in the room.
- Use in small rooms or areas with medium to high partitions.
- For 8 ft ceilings: 484 ft².
- For 12 ft ceilings: 676 ft².

Product options

Ceiling-mount sensors

</table>

* Sensor mounting shown at 7 ft (2.1 m). Mounting height should be between 6 and 8 ft (1.6 and 2.4 m).
** 12 ft (3.7 m) is the maximum mounting height allowed.
How to design and specify

- A single occupancy sensor can communicate to all control devices in the room

Product options

Wall-mount sensors
- Use in large open rooms with few tall obstructions
- Coverage: 3,000 ft²
  - LRF2-OWLB-P-WH Occupancy/vacancy
  - LRF2-VWLB-P-WH Vacancy only

Corner-mount sensors
- Use in medium to large open rooms with few tall obstructions
- Coverage: 2,500 ft²
  - LRF2-OKLB-P-WH Occupancy/vacancy
  - LRF2-VKLB-P-WH Vacancy only

Hallway sensors
- For a 6 ft wide hallway: 50 ft coverage
- For a 10 ft wide hallway: 150 ft coverage
  - LRF2-OHLB-P-WH Occupancy/vacancy
  - LRF2-VHLB-P-WH Vacancy only

Accessories
- LRF-ARM-WH Flexible armature mounting kit for Radio Powr Savr wall, hall, corner sensors
- L-WIRECAGE-C Wire guard for ceiling-mount sensor
- L-WIRECAGE-W Wire guard for in-wall sensor

Sensor coverage diagrams

Wall mount*, 180°
- 1,500 ft²—minor motion
- 3,000 ft²—major motion

Top view

Corner mount*, 90°
- 1,225 ft²—minor motion
- 2,500 ft²—major motion

Top view

Hallway*, long narrow field of view
Coverage varies by hallway width and length

</tbody>
</table>

* Sensor mounting shown at 7 ft (2.1 m). Mounting height should be between 6 and 8 ft (1.6 and 2.4 m).
** 12 ft (3.7 m) is the maximum mounting height allowed.
How to design and specify

- A single daylight sensor is capable of controlling:
  - All Maestro switching and dimming zones
  - All PowPak switching zones
  - All PowPak dimming modules with 0-10 V control

Product options

<table>
<thead>
<tr>
<th>Daylight sensor</th>

Location for average size areas

Arrow points towards the area viewed by the sensor (towards windows).

H = Effective Window Height

Location for narrow areas (corridors, private offices)

Arrow points towards the area viewed by the sensor (away from window).
Available setup support services

Blocks of setup support time

- Lutron Services Representative — either onsite or remotely — supports the installation team in setting up the system
- Utilize the technician’s time in the way that best suits your needs: training, punch list items, or complete programming independently
- Mix and match remote and onsite blocks of time and use them when you need them during the construction timeline
- Choose the amount of time you need

Product options

<table>

Available startup services

Onsite full-scope startup

- Lutron Service Representative onsite to ensure proper system startup and configuration
- Train facilities staff to best utilize and maintain the lighting control assets
- Reduce risk and keep your installation team small by having us do the setup for you.
- Includes a Commercial System Limited Warranty
- Onsite startup enhancements available

Remote full-scope startup

- Dedicated Lutron Remote Technician works with your installation team to ensure proper system startup and configuration
- Introduce end-user facilities staff to system components and resources available
- Less lead time to schedule than onsite startup
- Lower cost than onsite startup
- Commercial system limited warranty available

Available Operational Services
- Support the facilities team to maximize system potential
- Reprogram the system as space needs change over time
- Support retro-commissioning requirements
- Pre-purchase with the system to capture costs in capital budget

Product options
Operational service models
LSC-TRAINING Customer-site solution training
LSC-SYSOPT System optimization service
LSC-OS-PROG8-EN 8 hours of onsite reconfiguration support
LSC-OS-PROG4-EN 4 hours of onsite reconfiguration support
LSC-RMT-PROG4-EN 4 hours of remote reconfiguration support

Remote and onsite services are also available for purchase after the system is in operation at hourly, half-day and full-day rates; contact Lutron at lscwarranty@lutron.com for more information.

Commercial system limited warranty
The commercial system limited warranty offers 5 years of parts coverage, 2 years of first-available onsite/remote response time for system issues, and 24/7 technical support. Warranty included with onsite full-scope startup & available with remote full-scope startup.

Product options
Vive limited warranty
LSC-B2 Commercial System 2-Year Limited

Technology Support Plans (TSPs)
All Lutron Technology Support Plans provide 100% parts and diagnostic labor coverage for up to 10 years. Optional response-time guarantees and preventive maintenance visits enable the coverage to be customized to meet the facility’s needs. TSPs are available for any Vive system; a warranty audit visit will be included with the purchase of a TSP when full-scope startup is not purchased.

Product options
Vive Technology Support Plans
LSC-SILV-IW Silver Level Technology Support Plan
LSC-GOLD-IW Gold Level Technology Support Plan
LSC-PLAT-IW Platinum Level Technology Support Plan
LSC-WARR-AUD Warranty Audit Visit

Note: For detailed warranty and technology support plan descriptions see lutron.com/services

Vive warranty information
Vive wireless solutions are all covered by a 5-year parts warranty with registration of the product. Additional technology support options are available to meet your project needs. See the options below.

In-wall: Occupancy/vacancy switches

Other energy saving devices by Lutron

These devices do not integrate with the Vive system

Features and benefits

- Standalone solutions are not compatible with the Vive hub
- Lutron XCT technology for superior sensitivity prevents false ons and false offs
- Automatically turns lights off when space is unoccupied
- Easy to install, directly replaces an existing control
- Lutron’s Smart Ambient Light Detection learns your preferences over time and adapts accordingly
- Lutron’s Adaptive Zero-Cross Switching extends relay lifetime
- 180° sensor field-of-view; must have unobstructed view
- Up to 900 ft² major motion coverage and 400 ft² minor motion coverage
- Adjustable timeout—1, 5, 15, 30 minutes
- Vacancy/partial-on models available to meet CA Title 24 requirements
- Dual-circuit sensors provide bi-level control of two circuits, as required by specific energy codes
- Select from up to 27 colors to complement the décor*

Maestro dual-technology sensor switch

**Dimensions**
- **W**: 2.94" (75 mm)
- **H**: 4.69" (119 mm)
- **D**: 1.44" (38 mm)

**Features and benefits**
- Standalone solutions are not compatible with the Vive hub
- Lutron XCT technology greatly enhances the performance of dual-technology sensors, enabling them to detect very fine motion like typing
- Automatically turns lights off when space is unoccupied
- Easy to install; directly replaces an existing control
- Lutron’s Smart Ambient Light Detection learns your preferences over time and adapts accordingly
- Lutron’s Adaptive Zero-Cross Switching extends relay lifetime
- 180° sensor field-of-view; must have unobstructed view
- Up to 900 ft² major motion coverage and 400 ft² minor motion coverage
- Adjustable timeout—1, 5, 15, 30 minutes
- Vacancy models available to meet CA Title 24 requirements
- Dual-circuit sensors provide bi-level control of two circuits, as required by specific energy codes
- Select from up to 27 colors to complement the décor*

<tbody>
<tr>
<td>MS-Z101-XX</td>
<td>8 A lighting 120-277 V; occupancy/vacancy; multi-location/3-way/single pole</td>
</tr>
</tbody>
</table>

Controls electronic LED drivers and fluorescent ballasts
- Miswire and load incompatibility alert — lens will flash red if control is miswired or connected to an incompatible fixture
- Selectable dimming curve optimizes performance of 0-10 V LED drivers
- Lutron’s Adaptive Zero-Cross Switching extends relay lifetime

* (XX in the model number represents color/finish code; use WH for White; please visit lutron.com for other color choices.) See Maestro colors on page 51.

† Vacancy-only models available. Replace the "O" in the model number with a "V".

Standalone Solutions

Maestro dual-technology, dual-circuit sensor switch

**Dimensions**
- **W**: 2.94" (75 mm)
- **H**: 4.69" (119 mm)
