

Maestro Wireless® product reference guide

What can you do with Maestro Wireless?

Add Convenience

- Control lights from anywhere in a room—or outside the home—with a Pico® wireless control
- Automate lights with an occupancy sensor to turn on as you enter a space and off again when you leave

Create Ambiance

- Adjust dimmers and lamp dimmers with Pico wireless controls to set the right light level for any activity
- Choose a tabletop lamp dimmer for local or wireless control, or choose the plug-in dimming module, which hides under or behind furniture, and is controlled with a Pico

Enhance Security

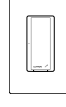

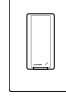

- Use a Pico wireless control to turn lights on from your car so you can walk into a well-lit home
- Add a switch where one is needed, rather than crossing a room in the dark—simply mount a Pico wireless control to the wall

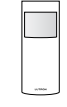

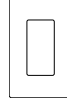

Save Energy

- Turn lights off in unoccupied spaces with an occupancy sensor, or remotely as you leave your home with a Pico wireless control
- Turn off appliances in standby mode (such as printers, computers and charging stations) with the plug-in appliance module
- Dim lights to reduce energy usage or use a daylight sensor to automatically adjust light levels based on available daylight
