Commercial Application Guide

Code Compliance | Lighting Controls

Title 24-2016
This document summarizes the lighting and receptacle control requirements for commercial buildings. It is for information purposes only. It is not meant to replace your state’s or local jurisdiction’s official energy code. Please refer to your local building energy code or authority having jurisdiction for your precise requirements. Only the authority having jurisdiction can guarantee code compliance.

To learn more about these products and their specifications, go to lutron.com/catalogs

* For the latest information on products compatible with the Vive wireless hub go to lutron.com/vive
** Requires QS Timed clock
¹ Automated Demand Response capability requires signal from a third-party device

Codes can sometimes be complicated and difficult to navigate. This commercial application guide provides examples of how Lutron products can be used to meet or exceed code requirements. This guide focuses on Vive and Vive compatible solutions, but our other control systems offer similar features.
Summary of Requirements for Lighting and Receptacle Controls
Title 24-2016

The requirements listed below are summarized for simplicity and may have other exceptions that were omitted.

<table>
<thead>
<tr>
<th>Minimum control type</th>
<th>Description</th>
<th>Code provision</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switching</td>
<td>Lighting shall be capable of turning ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.</td>
<td>130.1 (a)</td>
</tr>
<tr>
<td>Multi-level or dimming</td>
<td>Lighting shall be capable of multiple control steps in enclosed spaces 100 sq. ft. or larger. Light level requirements are defined in Table 130.1-A. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control. Outdoor sign lighting ON during both day and night must be dimmed during nighttime hours.</td>
<td>130.1 (b) &amp; 130.3 (a) 1 &amp; 2</td>
</tr>
<tr>
<td>Timeclock¹</td>
<td>Interior: Scheduled control, based on time-of-day, turns lighting ON or OFF based on typical occupancy. Occupancy sensors also comply as an alternate to using a timeclock. Exterior &amp; Parking Garages: Scheduled control, based on time-of-day and sunrise/sunset requires astronomical timeclock, turns lighting ON or OFF based on typical occupancy and daylight.</td>
<td>130.1 (c) 1 &amp; 2</td>
</tr>
<tr>
<td>Occupancy sensor</td>
<td>Automatic control turns lighting ON upon occupancy or OFF after a vacancy of 20 minutes or less. When manual ON is used, provide a vacancy sensor which does not allow for automatic ON.</td>
<td>130.1 (c)</td>
</tr>
<tr>
<td>Full ON</td>
<td>When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to maximum lighting power.</td>
<td>130.1 (c) 1</td>
</tr>
<tr>
<td>Partial ON</td>
<td>When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to 50% or less of maximum lighting power.</td>
<td>130.1 (c) 5</td>
</tr>
<tr>
<td>Full OFF</td>
<td>When initiated by a timeclock or occupancy sensor, lighting is automatically turned OFF.</td>
<td>130.1 (c) 5 &amp; 7</td>
</tr>
<tr>
<td>Partial OFF</td>
<td>When initiated by a timeclock or occupancy sensor, lighting is automatically reduced by at least 50% of maximum lighting power for interior spaces, 20% for parking garages, and 40% for building exteriors. Automatic full OFF also complies for interior spaces.</td>
<td>130.2 (a)</td>
</tr>
<tr>
<td>Daylight responsive control¹</td>
<td>For interior spaces, there must be at least two light levels between ON and OFF. For sidelight and skylight zones (see the “Daylight zone requirements” diagram), For interior spaces, there must be at least two light levels between ON and OFF.</td>
<td>130.1 (d) &amp; 7</td>
</tr>
<tr>
<td>Daylight responsive control¹</td>
<td>For interior spaces, there must be at least two light levels between ON and OFF. For sidelight and skylight zones (see the “Daylight zone requirements” diagram), For interior spaces, there must be at least two light levels between ON and OFF.</td>
<td>130.2 (c) 3, 4, &amp; 5</td>
</tr>
<tr>
<td>Recptacle control</td>
<td>At least 50% of the receptacles shall automatically turn OFF based on typical occupancy or after a vacancy of 20 minutes or less. Each uncontrolled receptacle must have at least one controlled receptacle within 6 feet. Open offices with receptacles in modular furniture must include one controlled receptacle per workstation. Plug in devices do not comply.</td>
<td>130.5 (d)</td>
</tr>
<tr>
<td>Demand Response</td>
<td>Automatic lighting reduction by a minimum of 15% of total installed lighting power in response to a Demand Response signal is required for new buildings larger than 10,000 sq. ft. or luminare alterations that increase the lighting power in the enclosed space.</td>
<td>130.1 (e)</td>
</tr>
</tbody>
</table>

For areas being used as a path of egress or fixtures being used for emergency, verify compliance with your local authority having jurisdiction.

Acceptance (functional) testing is required for all new construction applications to ensure that control hardware and software are calibrated, programmed and functioning properly (Code provision C408.3).

1 When multi-level lighting control and/or daylight responsive control is required, Lutron recommends using continuous dimming to allow for smooth light level adjustment and maximize energy savings.
2 Lutron recommends using occupancy sensors to achieve automatic on/off requirements in place of a timeclock to maximize energy savings and optimize user experience.
3 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

Daylight Zone Requirements:

Daylight control is not required when the total lighting power of a daylight zone is 120 W. or less (600 for parking garages), or when the total glazing/opening area is 24 sq. ft. or less (36 sq. ft. for parking garages). Other exceptions exist, based on space type, window area, neighboring obstructions, and glass transmittance.

Daylight Zone Requirements: Sidelighted daylight zones must be controlled separately from toplighted zones. North, South, East, and West zones must also be controlled separately.

Daylight Exceptions:

Sidelighting (Window)

Toplighting (Skylight)
The compliant solutions listed below are suggested based on total installed cost, simplicity of design, and basic functional needs for the space. These solutions do not represent the only compliant options to meet lighting and receptacle control requirements. Applications in this guide will illustrate these solutions and/or alternate solutions for advanced functionality.

1 Retrofit requirements indicated are for lighting alterations which replace existing luminaires with new luminaires without redesign of interior spaces. The solutions shown for interior spaces and parking garages are compliant when the lighting power is reduced by at least 50% in offices, retail spaces, and hotels, and by at least 35% in all other space types. Exterior retrofit requirements indicated are for alterations which increase the Lighting Power Density (LPD), or replace at least 50% of the total luminaires.

2 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

3 Astronomical timeclock shall ensure the lights are off during daylight hours. Occupancy sensor shall provide Full ON and Partial OFF control. Occupancy sensing not required for lighting mounted higher than 24 feet.

4 For areas not designated as a path of egress, the occupancy sensor must turn lights to full OFF.

1 Retrofit requirements indicated are for lighting alterations which replace existing luminaires with new luminaires without redesign of interior spaces. The solutions shown for interior spaces and parking garages are compliant when the lighting power is reduced by at least 50% in offices, retail spaces, and hotels, and by at least 35% in all other space types. Exterior retrofit requirements indicated are for alterations which increase the Lighting Power Density (LPD), or replace at least 50% of the total luminaires.

2 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

3 Astronomical timeclock shall ensure the lights are off during daylight hours. Occupancy sensor shall provide Full ON and Partial OFF control. Occupancy sensing not required for lighting mounted higher than 24 feet.

4 For areas not designated as a path of egress, the occupancy sensor must turn lights to full OFF.
This application guide is designed to help specifiers and contractors understand codes and Lutron controls in a simple manner. Each of the pages will lay out different spaces, the corresponding lighting control products and the way the system is setup in the space.

**For Specifiers**
Use this application guide for design suggestions, the way the system operates and to specify the relevant products for each space.

**For Contractors**
Use this application guide to understand how the system is installed, the way the system must operate and to order the correct products for each application.

**How to Use this Guide**

- **Room type**
- **Type of solution**

**Classroom | New Construction**

**Visible System Components**

- Pico wireless control
- Radio Powr Savr wireless corner-mount vacancy sensor
- daylight sensor

**Control Functionality**

- **Occupant Enters:**
  - All lights automatically turn on to 50% light level.
  - All lights automatically turn on to 80% max.

- **When Occupied:**
  - Automatic: Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.
  - Manual: Occupant uses wall dimmers to set desired light levels for general and white-board lights.

- **Occupant Exits:**
  - All lights automatically turn off 15 minutes after all occupants exit.

**Control Strategies**

- **Partial On Auto Off**
- **Occupancy/Vacancy**
- **Full On Dim**
- **Daylight Harvesting**
- **Full On Dim**
- **Personal Dimming**
  - Max: 100% Max: 85%
- **High-end Trim/Tuning**
- **Demand Response**

**Lighting Energy Savings**

- 60%
  - Go to lutron.com/references for more information.

**System Notes:**
- For non-daylit classrooms, all general lighting can be connected to a single 0-10 V dimming module.
- Go to lutron.com/vive for complete compatibility and design details.
- This solution requires 0-10 V enabled ballasts and drivers by others.

**Type of solution**

- **Retrofit Solutions** are simple and inexpensive solutions, generally suited for a basic retrofit.
- **New Construction Solutions** are value driven, generally best suited for new construction.
- **Recommended Solutions** have advanced functionality for greater comfort and energy savings.

**Learn how the products are laid out in the space**

**Learn more about the products used in the space**

**Learn what strategies are implemented in the space**

**Learn what energy savings you achieve over manual shut-off**

**Understand how the space functions with the installed system**
Vive Local Solutions Layout
Title 24-2016

This is a high-level overview of the local solutions layout. For individual room requirements refer to the detailed room type solutions in this guide. A single PowPak module can control a single or multiple fixtures. The products shown here are representative of local solutions. Multiple product options are available to meet the needs of the space.

Vive wireless hub*
PowPak module
Occupancy sensor
Pico wireless remote control
Daylight sensor

Vive wireless hub Features:
• Central control, management, and monitoring of Vive devices via web browser
• Supports astronomic and time-of-day events
• Two contact closure inputs for 3rd party integration such as Automatic Demand Response
• WiFi access for easy commissioning
• Control up to 10,000 sq. ft. with a single hub
• Optional BACnet integration

* Go to lutron.com/vive for complete compatibility and design details

Visible System Components

Pico wireless control

Control Functionality

When Occupied:
- Manual: Occupant uses wall switch to turn all lights off.
- Timeclock: Timeclock turns perimeter lights on during normally occupied hours. Timeclock turns lights off during normally unoccupied hours.

Control Strategies

Scheduling

7am: Dim 7pm: Off

Lighting Energy Savings*

10%

* Go to lutron.com/references for more information.

Code Notes: Requirements specified for atriums 20-40 ft. in height. This solution is code for lighting retrofits when the lighting power is reduced by at least 50% in offices, retail spaces, and hotels, and by at least 35% in all other space types. Go to lutron.com/vive for complete compatibility and design details.
# Visible System Components

## Control Functionality

### When Occupied:
- **Automatic:** Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.
- **Manual:** Occupant selects scenes to set desired light levels for all lights.

### Timeclock:
- Timeclock turns all controlled receptacles on and lights on to 50% light level during normally occupied hours. Maximum light level is set to 80%.
- Timeclock turns lights and controlled receptacles off during normally unoccupied hours.

### System Events:
- **Demand Response:** All lights and controlled receptacles automatically dim 20% during demand events.

## Control Strategies

- **Daylight Harvesting**
- **Scene Control**
- **High-end Trim/Tuning**
- **Scheduling**
- **Plug Load Control**
- **Demand Response**

## Lighting Energy Savings*

60%

*Go to lutron.com/references for more information.

---

### Code Notes:
- **Requirements specified for 20-40 ft. atriums.**
- Go to lutron.com/vive for complete compatibility and design details.
- This solution requires 0-10V enabled ballasts and drivers by others.
Visible System Components

Control Functionality

Occupant Enters:
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually.

When Occupied:
Manual: Occupant uses wall switch to turn all lights off.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

Control Strategies

Maestro vacancy sensing switch

Code Notes:
This solution is code compliant for lighting retrofits when the lighting power is reduced by at least 50% in offices, retail spaces, and hotels, and by at least 35% in all other space types.

*Maestro MS-VPS6M2-OV-WH is not compatible with Vive wireless hub.

Lighting Energy Savings*

30%

*Go to lutron.com/references for more information.
Break Room | New Construction
Title 24-2016

Visible System Components

Control Functionality

Occupant Enters:
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

Controlled receptacles automatically regain power when occupant enters.

When Occupied:
Manual: Occupant uses wall dimmer to set desired light levels for all lights.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

50% of all receptacles automatically turn off 15 minutes after all occupants exit.

System Events:
Demand Response: All lights automatically dim 20% during demand events.

### Visible System Components

- **Pico**
  - Wireless control
  - Model: RMJS-8T-DV-B
  - Description: PowPak dimming module with 0-10V
  - Qty: 2
  - List Price: $150.00

- **Radio Powr Savr**
  - Model: RMJS-20R-DV-B
  - Description: 20A PowPak relay module
  - Qty: 1
  - List Price: $139.00

- **Radio Powr Savr**
  - Model: LRF2-DCRB-WH
  - Description: Wireless daylight sensor
  - Qty: 1
  - List Price: $120.00

- **Radio Powr Savr**
  - Model: LRF2-VKLB-P-WH
  - Description: Wireless corner-mount vacancy sensor
  - Qty: 1
  - List Price: $85.00

- **Pico**
  - Model: PJ2-3BRL-GWH-L01
  - Description: Wireless 3-button with raise/lower control
  - Qty: 2
  - List Price: $21.00

- **Pico**
  - Model: PICO-WBX-ADAPT
  - Description: Wallbox adapter
  - Qty: 2
  - List Price: $8.00

- **Vive**
  - Model: HJS-1-FM
  - Description: Wireless Hub
  - Qty: Shared
  - Consult your local rep for Hub pricing and service options.

### Code Notes:
- For non-daylit conference rooms, all general lighting can be connected to a single 0-10V dimming module.
- Want to add a Vive wireless hub for more features? Go to lutron.com/vive for complete compatibility and design details.
- This solution requires 0-10V enabled ballasts and drivers by others.
Visible System Components

Control Functionality

Occupant Enters:
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

Controlled receptacles automatically regain power when occupant enters.

When Occupied:
Automatic: Overhead lights dim/brighten based on daylight availability. There is one perimeter daylight zone.

Manual: Occupant select scenes to set desired light levels for all lights. Entry scene controller has 3 user preferred presets and 1 all off button.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

50% of all receptacles automatically turn off 15 minutes after all occupants exit.

System Events:
Demand Response: All lights automatically dim 20% during demand events.

Visible System Components

- Pico wireless control
- Radio Powr Savr wireless hallway occupancy sensor

Control Functionality

**Occupant Enters:**
All lights automatically turn on to maximum light level.

**When Occupied:**
Manual: Occupant uses wall switch to turn all non-emergency lights off.

**Occupant Exits:**
All non-emergency lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and re-zoning, system monitoring, timeclock functionality, and advanced integration.

Control Strategies

- Auto On
- Auto Off
- Occupancy/Vacancy
- Line-voltage wiring
- Clear Connect
- RF Communication
- To emergency power

Control Functionality

**Occupant Enters:**
All lights automatically turn on to maximum light level. Maximum light level is set to 80%.

**When Occupied:**
Manual: Occupant uses wall dimmer to set desired light levels for all lights. Manual control cannot fully shut off the lights. Minimum light level is set to 10%.

**Occupant Exits:**
All lights automatically go to minimum light level 15 minutes after all occupants exit.

**Emergency Mode:**
Lighting connected to emergency power turns on to full output.

**System Events:**
Demand Response: All lights automatically dim 20% during demand response event. Demand response cannot shut off the lights.
