

Quantum® Mobile Control and Programming Software License

This software license allows mobile control and programming of a Quantum® system via an *Apple iPad*¹ or a *Microsoft® Surface™* which communicates to the system on a local area network (LAN) or corporate intranet.

Features

- Control and monitor²:
 - Area lighting scenes and zones
 - Lutron® Sivoia® QS shades
- Edit²:
 - Adjust area scene lighting levels
 - Adjust area scene fade and delay times
 - Adjust shade preset levels
 - Make zones unaffected in scenes
 - Copy and paste area scenes
- Area access control provided to restrict access to specific areas per user
- The ability to limit access to the edit function
- Identify zones by flashing
- Historical logging of who made changes. Report can be viewed in Quantum Vue™³ in Quantum® systems that have a server
- App can be used with a server connected through Q-Gateway, or without a server connected directly to the processor
- Languages supported: English, Spanish, French, German and Simplified Chinese
- Quantum® Mobile Control and Programming Software can be used wirelessly (using *iPad* app or *Windows®* app) or with a wired Ethernet connection⁴ (only available when using the *Windows®* app)

Quantum® Mobile Control and Programming Software License (QSW-MC-PS-A)

Software Compatibility Chart

Quantum® Version	Apple App Version	Windows App Version	Server to Device	Processor to Device
2.6	1.0/2.2/2.3	X	✓	X
2.7	2.2/2.3	X	✓	✓
3.0	2.3	X	✓	✓
3.1	2.3	1.0	✓	✓

¹ iPad not included.

² For GRAFIK Eye® QS applications, reconfiguration of scenes is done from the GRAFIK Eye® QS main unit (the Quantum® Mobile Control and Programming software is not used to reconfigure these devices). This App cannot control CCO Integration zones and DMX 3-channel lighting zones.

³ Q-Admm is used to view the report in the Quantum versions prior to 3.2.

⁴ Device must be equipped with a wired ethernet connection.

Job Number:	

Administration

- Administrators can manage user accounts from the App
 - Create and configure usernames and passcodes
 - Configure area access rights
 - Configure edit privilege
- Administrators can set up new connections to the system and configure access rights
- Secure access to lighting system through Lutron® Q-Control+ App provided by network security (provided by others), creation of administrator user account(s)/passcode(s), and through the security PIN of the device
- App connectivity requires Quantum® Mobile Control and Programming software license

Requirements for Server to device Connection

- *iPad* mobile digital device or Microsoft® Surface™ *iPad*
 - Lutron® Q-Control+ App version 1.0 or greater
 - iOS version 7.x or greater
 - Lutron® tested models: *iPad* Air 2, and *iPad* mini
 - Quantum® version 2.6 or later
 - *Apple* ID required to download the Lutron® Q-Control+ App from the *App Store* (if using *iPad*)
- Surface™
 - Windows® 10
 - Quantum® version 3.1 or later
- Quantum® server (can be physical or virtual)
- 1 license required per device per Quantum® system
- The maximum number of concurrent devices used on a Quantum® Server: 20

Requirements for Quantum® Processor to device Connection

- Lutron® Q-Control+ App version 2.0 or greater
- Quantum® software suite version 2.7 or later
- 1 license required per device per Quantum® system
- The maximum number of concurrent devices used on a Quantum® Processor: 2

- Only one sub-system can be controlled when connected directly to a processor. Multiple sub-systems need a server connection to be controlled from the same application

Networking Requirements

- Network access point(s) and connectivity with Quantum® server to be provided by the customer
- Network components to be set up and configured by the customer's IT department
- This App will function only on a local network or company intranet; it is not intended for use via the Internet
- The following TCP ports need to be opened between the mobile device and the server: 5443, 5327
- Server requires a static IP address when connecting via the server
- A gateway address is required for Quantum® Processor to mobile device connections where the connection to the mobile device is on a different Ethernet network than the Quantum® Processor

Lutron Recommendations

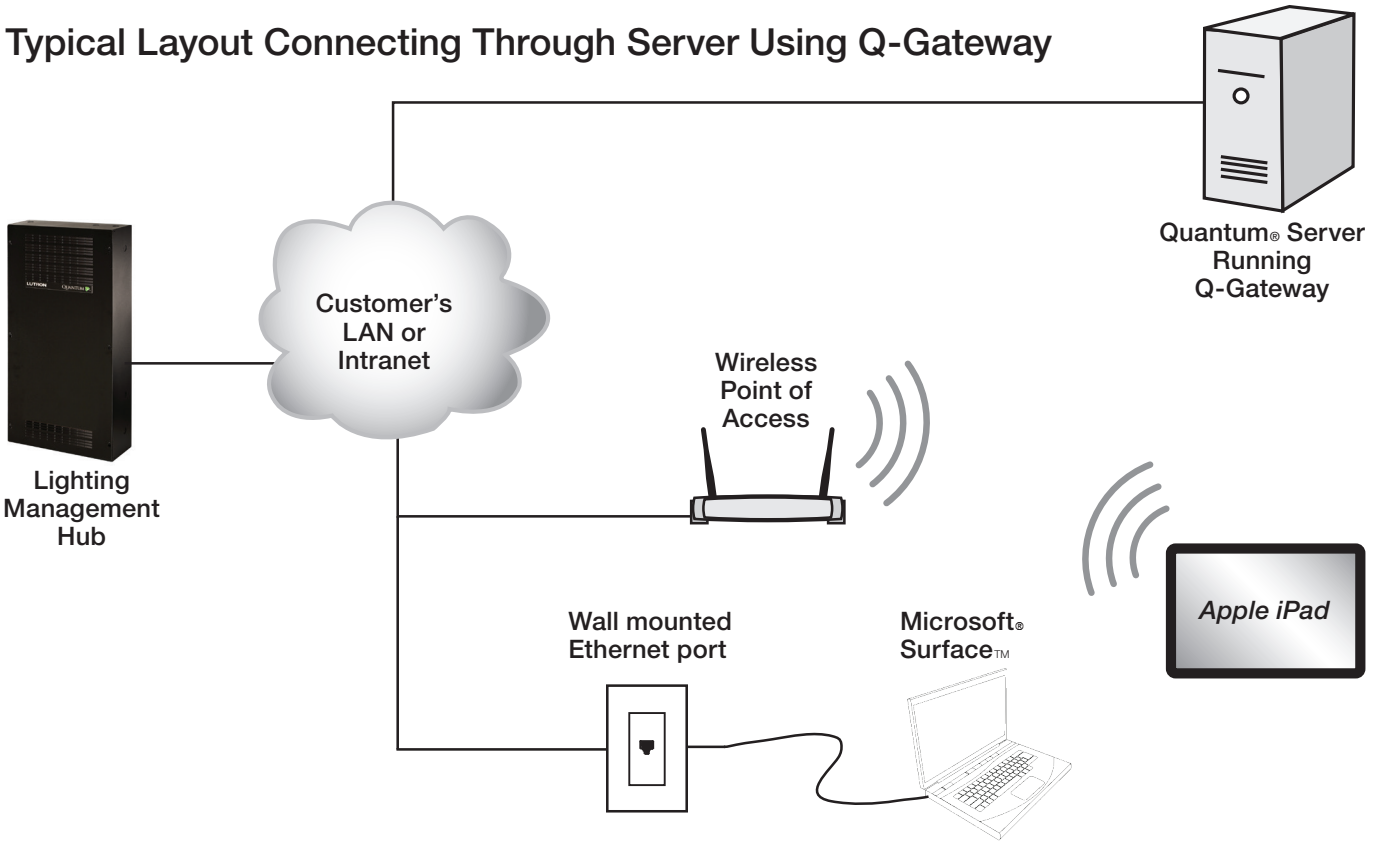

- Prior to using the Quantum® Mobile Control and Programming Software, your network should be configured and in use
- Mounting an *iPad* on a wall for use with the Q-Control+ app is not recommended
- LSC-INT-VISIT: A Lutron® Service Representative will attend a meeting to discuss building network requirements at the location determined by a facility representative. This visit should take place prior to start-up
- LSC-AF-VISIT: A Lutron® Service Representative will attend an aim-and-focus visit to make lighting adjustments at the direction of a lighting designer
