

Centralized Lighting Control System: Non-Lutron-Supplied Computers

eLumen™ Manager:

Customer-Supplied Desktop and Laptop Specifications

Lutron recommends that customers purchase Lutron supplied computers to operate Lutron Centralized Lighting Control Systems. These computers are factory-configured, are covered by a Lutron warranty, and can be maintained and troubleshot by Lutron. The customer may elect to supply their own computer. In this case, the computer must meet the minimum required specifications contained herein. All eLumen™ software must be purchased with the system or separately and will be loaded onto the customer-supplied computer at the time of commissioning.

Considerations for Customer-Supplied Computers

- Lutron Field Service will install the purchased Lutron software on one computer only, at the time of commissioning. Customer must have available:
 - The working computer that meets the minimum Lutron specification
 - The original Windows® installation disks
 - All driver disks for the customer-supplied computer
 - Administrative rights for the customer-supplied computer
 - An IT representative
- Computers that meet the minimum specification but cannot be configured by Field Service (maximum on-site configuration time is limited to 4 hours) will require a connection to the Internet for remote access from a Lutron engineer (additional charges may apply).
- If remote access is not available, the computer must be shipped (using an insured shipment) by the customer, at the owner's risk and expense, to Lutron for Lutron software installation. The computer must be shipped with the correct operating system disk and all driver disks. A 4-week lead-time will apply to any computers shipped to Lutron. To cover the Lutron troubleshooting, an additional 4-hour service charge will apply. Computers supplied by the customer are not covered by a Lutron warranty.
- Once configured by Lutron, the computer must be used for Lutron lighting control only and cannot be used for other applications.
- Lutron reserves the right to ask the customer to reformat the customer's computer and reload the operating system to rectify any installation issues.
- The customer must not install any Windows® patches, unless Lutron has given prior written approval.
- No applications other than the Lutron software may be installed on the computer.
- Consult with Lutron before installing any anti-virus or security software.
- Any Lutron software upgrades can only be loaded on computers that have been unaltered after the initial Lutron configuration. Otherwise, additional charges will apply.

Lutron software must be purchased separately.

Lutron Centralized Lighting Control Systems without Computers

This system is being quoted/supplied as a stand-alone system. System operation will be via local controls or timeclock operation. Changes will not be possible without purchasing the Lutron computer, the appropriate software licenses, OR, for scene changes, a remote programming device such as a Viseo® or handheld programmer. Additionally, without the use of a computer, system diagnostics functions cannot be run. If systems require setup changes and the customer elects not to purchase the computer with the required software, the system can be reprogrammed by Lutron, but field service charges will apply. Reprogramming is not covered under the Lutron centralized system warranty.
