

Signature Series
4 button keypad (actual size) –
custom backbox provided

HomeWorks® home light control systems deliver complete control of lighting and shades in residences around the world. Convenience, safety, ambiance and energy savings are built-in, adding value to the residence.

HomeWorks® combines wired and wireless communication to perfectly fit the system to the homeowner's needs, and to customize any home (new or existing). HomeWorks® features elegant styles and finishes, including architectural matte, designer satin and gloss, metal finishes, and custom finishes.

HomeWorks® extends the energy savings that all dimmers provide by using timed events, occupancy sensors, and a green button, which reduces light levels through the home – saving energy, and adding convenient control.

Minimize the controls on the wall by designing a system which uses remote dimming and switching panels controlled by elegant keypads in each room.

Architectural style wired Vareo® dimmer and seeTouch® keypads provide simple, clean lines in a local control option. Choose control of individual lights or create scenes that set the mood for any occasion.

seeTouch® keypad and Vareo® dimmer in 2-gang architectural wallplate

Choose designer style dimmers and switches to control lights locally for intuitive, cost-effective control of lighting. Keypads control lights and shades in and around the home. Available wired and wireless (RF).

seeTouch® keypad and Maestro® dimmer in 2-gang Claro® or Satin Colors® wallplate

Wireless dimmers and keypads add control to any area. HomeWorks® Wireless can be installed easily in any existing home.
