

HomeWorks System Upgrade Training

Who should attend?

Project managers, programmers, installers, and system designers from qualified accounts

The one-day HomeWorks System Upgrade Training will provide the student with hands-on, practical knowledge that is necessary for them to be able to easily navigate a system upgrade from older systems to HomeWorks QS. This course will use a combination of lecture and hands-on exercises to demonstrate the requisite knowledge required for a system upgrade, exploring best practices and important tools that can be used to achieve success.
