GRAFIK T RF C•L Hybrid Keypads

RadioRA 2 architectural GRAFIK T RF C•L Hybrid keypads function as a dimmer and keypad combined into a single device. Hybrid keypads are great for retro-fit applications since they eliminate the need to install two separate devices. Normal keypad operation is available if no load is connected or load burns out.¹

**Features**

- Hybrid keypad allows for local control of load as well as typical keypad functionality.
- Hybrid keypad will function as a normal keypad when no load is installed or load burns out.¹
- Custom, backlit, engraved, scene/zone descriptions on faceplate.
- Dynamic Backlighting Management (DBM) automatically adjusts the intensity of the backlit engraving to ensure text is readable in any light.
- All buttons are fully programmable, including the raise/lower functionality.
- C•L technology with microprocessor based dimming for control of dimmable LED lamps.
- If using LED bulbs, they must be Lutron compatible! For compatibility and performance information, visit our website at www.lutron.com/led, which is constantly being updated.
- Optional neutral connection available for superior LED dimming performance.¹
- Simple touch control.
- Distinctive architectural aesthetic.
- Low-end and high-end trim are available for improved LED dimming performance.
- Installs in single-pole or multi-location applications. Companion devices are available for multi-location control with a hybrid keypad (maximum 4 companion devices per keypad, 1 main control per circuit).²
- Use Lutron GRAFIK T wallplates (sold separately). See **Colors and Finishes** on page 13 for details.
- Lutron GRAFIK T wallplates snap on with no visible means of attachment.

¹ If no load is connected, a neutral connection is required.
² Companion devices provide control of local load only.

1. Not for use with receptacles or appliances (e.g., garbage disposals). See Application Note #109 for compatibility with dimmable receptacles.
2. If using LED bulbs, they must be Lutron compatible! For compatibility and performance information, visit our website at www.lutron.com/led, which is constantly being updated.
3. Includes Mark X, Tu-Wire, and POWERSENSE® ballasts.

### Design Features

- When neutral is connected, the Hybrid Keypad can be used as a Normal Keypad even if there is no load.
- If load is connected the top button will toggle the load (before commissioning).
- Internal dimmer can be assigned to any button on the Hybrid Keypad and can be programmed to be controlled by any Keypad.
- Can be installed in either single location or multi-location (with a Companion Device) installations. Companion devices connected to Hybrid Keypad will control local lighting zone only.
- Can be installed in two-wire or neutral wire applications.
- Dynamic Backlighting Management (DBM) automatically adjusts the intensity of the backlit engraving to ensure text is readable in any light.
- At the press of a keypad button, lights fade ON or OFF to desired levels and shades/draperies open or close to desired shade positions.
- Keypad buttons are programmable to select scene or room preset levels or positions. Buttons can also be programmed with raise or lower functions.
- Faceplates are ordered separately and can be custom engraved with scene or zone description.
# GRAFIK T RF C•L Hybrid Keypads

## Specifications

|  |  
| Power | 120 V ~ 50/60 Hz  
| Typical Power Consumption | Hybrid Keypad: 0.20 W Companion Device: 0.10 W  
| Test conditions | load is off, if connected.  
| Regulatory Approvals | Compliant with UL 1472, Compliant with CSA C22.2 NO. 184.1-15, Compliant with NOM 003, Compliant with Part 15 of the FCC rules and Industry Canada license-exempt IC standards, IFTEL  
| Environment | Ambient operating temperature: 32 °F to 104 °F (0 °C to 40 °C), 0% to 90% humidity, non-condensing. Indoor use only.  
| Communications | Hybrid Keypads communicate with the RadioRA 2 system through Radio Frequency (RF) and must be located within 30 ft (9 m) of a repeater. Companion devices are not required to be within a specific range of a repeater.  
| ESD Protection | Tested to withstand electrostatic discharge without damage or memory loss.  
| Surge Protection | Tested to withstand surge voltages without damage or loss of operation, in accordance with IEEE C62.41-1991 Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits.  
| Power Failure (load connected only) | Power failure memory: should power be interrupted, the control will return to its previous state when power is restored.  
| Mounting | Requires a U.S. wallbox. 3 ½ in (89 mm) deep recommended, 2 ¼ in (57 mm) deep minimum.  
| Wiring (load connected only) | Uses conventional 3-way and 4-way wiring. Total multi-location wire length (blue wire) between all units must not exceed 150 ft (45 m).  

1 “XXX” in the model number represents color/finish code. See Colors and Finishes on page 13 for details.
GRAFIK T RF C•L Hybrid Keypads

Ganging and Derating
When combining controls in the same wallbox, derating is required. See Load Type and Capacity. No derating is required for companion devices.

1. Designed for use with permanently installed LED, incandescent, tungsten halogen, or magnetic low voltage transformers with halogen based lamps.
2. Power Boosters/Load Interfaces: can be used to control power boosters/load interfaces. For a list of compatible power boosters/load interfaces see Compatible Power Boosters and Load Interfaces. When using with power boosters/load interfaces, the neutral must be connected.
3. Not for use with receptacles or appliances (e.g., garbage disposals). See Application Note #109 for compatibility with dimmed receptacles.
4. Low-Voltage Applications: Use only with magnetic (core and coil) low-voltage transformers with halogen based lamps. Not recommended for use with electronic (solid-state) low-voltage transformers but UL® listed for dimmable ELV transformers.
5. Operation of a low-voltage circuit with lamps inoperative or removed may result in transformer overheating and premature failure. Lutron strongly recommends the following:
   - Do not operate low-voltage circuits without operative lamps in place.
   - Replace burned-out lamps as soon as possible.
   - Use transformers that incorporate thermal protection or fused transformer primary windings to prevent transformer failure due to overcurrent.
6. When using the hybrid keypad to control MLV halogen fixtures, the maximum lamp wattage is determined by the efficiency of the transformer, with 70%–85% as typical. For actual transformer efficiency, contact either the fixture or transformer manufacturer. The total VA rating of the transformer(s) shall not exceed the VA rating of the hybrid keypad.
7. Includes Mark X, Tu-Wire, and POWERSENSE® ballasts.

1 Includes Lutron compatible LED replacement lamps and Hi-lume 1% 2-wire LED driver.
2 Must meet transformer minimum load requirements.
3 If using LED bulbs, they must be Lutron compatible! For compatibility and performance information, visit our website at www.lutron.com/led, which is constantly being updated.

Compatible Power Boosters and Load Interfaces

Some local controls can be used to control power boosters or load interfaces. Up to three power boosters or load interfaces can be used with one control. See table below for a list of controls and compatible power boosters and load interfaces. When controlling power boosters/load interfaces, the neutral must be connected.

GRAFIK T RF C•L Hybrid Keypads

Operation

**Uncommissioned Behavior**
- Top button toggles local load On/Off
- All other buttons flutter to indicate uncommissioned status

**Flexible Control**
- Press to activate a scene or zone
- Buttons provide scene/zone status
- Buttons are fully programmable
- Raise/Lower button programming at any location

**Backlit, Engraved Text**
- Scene/zone descriptions are engraved on the faceplate
- Backlighting is uniform across all engravings
- Backlighting intensity is adjusted in real time to ensure readability in any light

**IMPORTANT NOTICE:**
**FASS - Front Accessible Service Switch**
To replace bulb(s), remove power by pulling the FASS down fully on all main controlling devices. After replacing bulb(s), push the FASS back up fully to restore power to the control(s).

---

1. 6 button configuration is shown for reference.
2. Engraving is generic text. All engraving is customizable.
