

## **Lutron Releases New Apple® iPhone™ and iPod® Touch App and Introduces New Away Mode Feature for its RadioRA® 2 Total Light Control System**

**Coopersburg, PA (September 9, 2010)** – Light control manufacturer Lutron Electronics is pleased to introduce the **Lutron Home Application**, which provides control of lights and shades, including the new RadioRA 2 total light control system, via an Apple iPhone and iPod Touch.

The Lutron Home Application provides control of a RadioRA 2 system over a Wi-Fi network and requires RadioRA 2 Software version 3.1.14 or higher. RadioRA 2 Software is available only to qualified installers.

The application is available now, free of charge, on iTunes®.

Also new to RadioRA 2 is an **Away Mode feature** that lets users simulate occupancy while away from home by automatically turning lights on and off and controlling shades. Also new is the ability to create additional timeclock modes for controlling the system during holidays or other special events, like Shabbat. These modes can be activated from any system keypad and from the new Lutron Home iPhone Application.

The new Away Mode feature provides energy savings and convenience – allowing users to only use lights that are needed for a specific event or activity – and to dim lights or turn them off when not needed. The Away Mode feature requires RadioRA 2 Software version 3.1.14 or higher.

### **About Lutron Electronics ([www.lutron.com](http://www.lutron.com))**

Lutron Electronics Co., Inc., headquartered in Coopersburg, Pennsylvania, designs and manufactures lighting controls and automated window treatments for residential and commercial applications. Lutron products save energy and make light bulbs last longer, making them an eco-friendly addition to the home and office.
