

Cleaning of Avant Collection Fabrics

Dusting

The Avant Collection™ soft fabrics can be routinely dusted using a vacuum cleaner with an upholstery attachment.

Cleaning

Lutron traditional draperies, Kirbé™ vertical drapery systems, and Lutron Roman Shades with CERUS™ safety technology™ can be cleaned on-site by a professional drapery cleaning service.

The preferred method is referred to as “injection/extraction cleaning” or ultrasonic cleaning. First, your window treatment is thoroughly vacuumed. Once the surface dirt has been removed, a solvent is sprayed onto the fabric and then immediately suctioned off.

- This is not “steam cleaning”.
- This method is very effective on fine drapery fabrics because it does not incorporate the use of heat and does not involve any agitation.
- 100% biodegradable and organic cleaning solvents and detergents are available that are specifically manufactured to effectively and safely clean the fabrics in our Avant collection.

Contact a local professional drapery cleaning service for more information. If drapery cleaning service needs the fabric fiber content of a specific fabric, it can be found on the back of the sample cards in The Avant Collection fabric binder.
