LEED® buildings | light control solutions

Lutron® light control for sustainable design

Today's innovative buildings are designed to be sustainable, adaptable, and energy efficient. Lutron is committed to helping design and construction professionals achieve these goals. We offer solutions for integrated control of daylight and electric light, and unsurpassed project support.

Lutron can help you design and layout any project, ensuring that the light control strategies complement your unique vision. Lutron light control solutions meet the specific requirements of the latest environmental design criteria, including the LEED® Green Building Rating Systems.

Lutron is a national member of the United States Green Building Council and a sponsor of Delaware Valley Green Building Council.

Genzyme Center, Cambridge, MA
LEED rating: Platinum

What is LEED®?

LEED—Leadership in Energy and Environmental Design—is a rating system started in 1998 and administered by the United States Green Building Council (USGBC). It provides an objective national standard for what constitutes a green building. It offers a set of scientifically based performance criteria for LEED project certification.

The LEED Green Building Rating Systems address seven topics. Lutron helps with six of the seven categories:

- 1 Sustainable Sites***—for responsible and environmentally-friendly site selection and design strategies
- 2 Water Efficiency**—for responsible water use and conservation
- 3 Energy and Atmosphere***—to optimize whole-building energy efficiency
- 4 Materials and Resources***—to promote responsible waste management and materials selection
- 5 Indoor Environmental Quality***—to minimize contaminants and optimize the indoor environment including the use of lighting controls and daylighting
- 6 Innovation in Design***—for exemplary performance above LEED requirements or for new green building innovations
- 7 Regional Priority***—to incentivize the achievement of LEED credits that are important to the local geography

Lutron® strategies for LEED projects include:

- astronomical timeclock scheduling
- occupancy/vacancy sensing
- dimming and switching systems (including fluorescent and LED dimming)
- tuning or high-end trim of light levels
- daylight harvesting
- automated window shades
- glare control
- personal control of light
- real-time monitoring
- load shedding and demand response
- integration to Building Management Systems (BMS)
- commissioning

* Lutron solutions help with this category.

Total Possible Points	110
------------------------------	------------

New Construction and Major Renovations

The LEED for New Construction rating system is designed to guide and distinguish high-performance commercial and institutional projects, including office buildings, high-rise residential buildings, government buildings, recreational facilities, manufacturing plants and laboratories.

Core and Shell Development

LEED for Core and Shell is a green building rating system for designers, builders, developers and new building owners who want to address sustainable design for new core and shell construction. Core and shell covers base building elements such as structure, envelope and the HVAC system. LEED for Core and Shell is designed to be complementary to the LEED for Commercial Interiors rating system, as both rating systems establish green building criteria for developers, owners and tenants.

Schools

The LEED for Schools rating system recognizes the unique nature of the design and construction of K-12 schools. Based on the LEED for New Construction rating system, it addresses issues such as classroom acoustics, master planning, mold prevention and environmental site assessment.

By addressing the uniqueness of school spaces and children's health issues, LEED for Schools provides a unique, comprehensive tool for schools that wish to build green, with measurable results. LEED for Schools is the recognized third-party standard for high-performance schools that are healthy for students, comfortable for teachers, and cost-effective.

Commercial Interiors

LEED for Commercial Interiors is the green benchmark for the tenant improvement market. It is the recognized system for certifying high-performance green interiors that are healthy and productive places to work, are less costly to operate and maintain, and have a reduced environmental footprint. LEED for Commercial Interiors gives the power to make sustainable choices to tenants and designers, who do not always have control over whole building operations.

Existing Buildings: Operations and Maintenance

The LEED for Existing Buildings rating system helps building owners and operators measure operations, improvements, and maintenance on a consistent scale, with the goal of maximizing operational efficiency while minimizing environmental impacts. LEED for Existing Buildings addresses whole-building cleaning and maintenance issues (including chemical use), recycling programs, exterior maintenance programs, and systems upgrades. It can be applied both to existing buildings seeking LEED certification for the first time and to projects previously certified under LEED for New Construction, Schools, or Core and Shell.

Certification levels for all LEED® 2009 rating systems:

100 base points plus 10 bonus points

Certified: 40–49 points

Silver: 50–59 points

Gold: 60–79 points

Platinum: 80 points and above

David L. Lawrence Convention Center, Pittsburgh, PA
LEED rating: Gold

Lutron can contribute to LEED® 2009 certification

Sustainable Sites

Light Pollution Reduction

Intent of the Credit:

Minimize light trespass from the building

Lutron Solution:

- Automated window shades with the right fabrics prevent light from escaping the building
- Occupancy sensors turn lights off when spaces are vacant to save energy and prevent light pollution from escaping the building
- Timeclock scheduling can be used to provide a building lighting sweep at night so that lights are off or set to a low dimmed level at certain times, saving energy and preventing light pollution

The Plaza at PPL Center, Allentown, PA
LEED® rating: Gold

Energy and Atmosphere

Commissioning

Intent of the Credit:

Verify that the building's energy systems are installed, calibrated, and performing effectively

Lutron Solution:

- Lutron field service team will help the Commissioning Authority (CxA) verify the installation and performance of the Lutron systems
- Lutron field service can train and provide necessary manuals to operating personnel
- Lutron field service system optimization or lighting energy audit ¹

Energy Efficiency Best Management Practices: Planning, Documentation, and Opportunity Assessment

Intent of the Credit:

Promote continuity of information to ensure that energy-efficient operating strategies are maintained and provide a foundation for training and system analysis

Lutron Solution:

Lutron field service system optimization or lighting energy audit ¹

Minimum Energy Performance

Intent of the Credit:

Establish a minimum level of energy efficiency for the building

Lutron Solution:

Occupancy sensors and timeclock scheduling can be used to meet the mandatory lighting control requirements in Section 9.4 of ASHRAE 90.1 2007

Did you know that more electricity is consumed for lighting than any other end use?²

Lutron solutions can reduce that by 60% or more while enhancing the space.

¹ www.lutron.com/optimize

² Energy Information Administration, 2003 Commercial Buildings Energy Consumption Survey, Figure 4, released April 2009. www.eia.doe.gov/emeu/cbecs/cbecs2003/lighting/lighting1.html

Lutron can contribute to LEED® 2009 certification

Energy and Atmosphere (cont.)

Optimize Energy Performance

Intent of the Credit:

Achieve energy performance beyond the prerequisite standard

Lutron Solution:

Using a combination of energy-saving light control strategies such as automated shading, daylight harvesting, high-end trim, light level tuning, dimming, scheduling, and occupancy sensing can reduce lighting loads by 60% or more; these strategies can also reduce HVAC loads by 20%

Measurement and Verification

Intent of the Credit:

Provide ongoing accountability of building energy consumption over time

Lutron Solution:

Quantum® lighting power monitoring provides continuous lighting energy consumption and savings data, and light control strategies, such as light level tuning, can be easily implemented to provide necessary corrective action to achieve the desired energy savings

Material and Resources

Recycled Content

Intent of the Credit:

Increase demand for building products that incorporate recycled materials

Lutron Solution:

100% Recycled fabrics for Lutron automated window shades

Indoor Environmental Quality

Low Emitting Materials— Systems Furniture and Seating

Intent of the Credit:

Reduce the quantity of indoor air contaminants that are odorous, irritating, and/or harmful to the comfort and well-being of installers and occupants

Lutron Solution:

GREENGUARD® Certified fabrics for Lutron automated window shades

Controllability of Systems—Lighting

Intent of the Credit:

Provide a high-level of lighting system control for individual occupants or groups in multi-occupant spaces (i.e. classrooms, conference rooms) and promote their productivity, comfort, and well-being

Lutron Solution:

All Lutron lighting controls from wallbox dimmers to preset scene controls such as GRAFIK Eye® QS help achieve this credit

Daylight and Views

Intent of the Credit:

Provide occupants a connection to outdoors through daylight and views into regularly occupied spaces

Lutron Solution:

Lutron automated window shades help control glare while still providing daylight and access to views

Innovation and Design

Innovation in Design

Intent of the Credit:

Additional points for exceptional performance above LEED® requirements and/or innovative performance in green building categories not addressed by LEED

Lutron Solution:

- Using the Quantum® Green Glance® energy savings display in conjunction with a distributed case study or building tours helps achieve innovation point for green education
- Using Quantum Hyperion™ solar-adaptive shading which automatically adjusts shades based on the position of the sun, may achieve an innovation point for Daylight and Views

LEED AP

Intent of the Credit:

Support and encourage the design integration required by LEED to streamline the application and certification process

Lutron Solution:

Lutron has several LEED APs on staff who can assist the project team with the LEED rating system

The School as a Teaching Tool

Intent of the Credit:

Integrate the sustainable features of a school facility with the school's educational mission

Lutron Solution:

Lutron Greenovation® provides state-of-the-art classroom lighting with state-correlated energy lessons³

Lutron project profiles

Hotel Arista

Naperville, Illinois

This hotel requires a guestroom lighting control system that supports the highest level of guest satisfaction, delivers energy savings and sustainability, and provides flexibility and simplicity; their choice—a Lutron Stanza™ system.

Hotel Arista is the first LEED certified hotel in Illinois, as recognized by the U.S. Green Building Council (USGBC). With the help of the Lutron Stanza lighting control system, it uses 21% less energy than the typical hotel property while providing unparalleled convenience and comfort to its guests.

LEED for New Construction
Certification awarded
May 29, 2009

“Saving energy and extending lamp life is a big part of a sustainable approach. The Lutron system helped us do that. In addition, the ability to dim the lights with this system demonstrates a unique sense of quality and creates a warm welcoming experience.”

Basil Souder, AIA
Principal
Lohan Anderson

Exelon Headquarters

Chicago, Illinois

Exelon Corporation, one of the nation's largest energy companies, chose Lutron EcoSystem® for their renovated office headquarters in the landmark Chase Tower. With the help of the Lutron system, the flagship headquarters became the largest office space (10 floors, approximately 220,000 square feet) to earn a Platinum rating in the U.S. Green Building Council's LEED for Commercial Interiors rating system.

Lutron energy conservation strategies such as dimmable lighting, daylight harvesting, and occupancy sensing helped the project achieve a 50% reduction in annual energy costs and 43% less energy than its previous offices. This savings is enough money to pay for the project's green features in less than five years.

HJ Kessler Associates

Lutron project profiles

Sidwell Friends Middle School Washington, D.C.

When Sidwell Friends School in Washington, D.C. recently upgraded its Middle School building, the administration decided that, in order to live up to the school's Quaker ideal of environmental stewardship, the building would have to be transformed into a LEED Platinum certified facility.

Sidwell was able to attain that rating with a host of sustainable design features, including the EcoSystem® lighting control solution from Lutron. The Lutron system helped Sidwell cut lighting energy consumption by 92%, and overall energy use by 55%.

A history of sustainability

At Lutron, sustainability is not a new concept. Since 1961, we have been designing industry-leading technology that saves energy and reduces greenhouse gas emissions.

Each year, Lutron solutions save over 9 billion kWh of energy.*

That's equivalent to:

- over 1 billion dollars in energy costs;
- as much energy as 2,000 windmills produce in one year;
- enough energy to light 4.5 million homes for one year;
- enough energy to light and power Times Square for 10 years; or
- as much CO₂ as 2 million acres of trees absorb in one year.

Global service and support

You can count on a level of support unequaled anywhere in the industry and anywhere in the world. Lutron provides 24/7 technical phone support. Lutron Field Service, made up of a global network of customer-focused field service engineers, provides world-class services that begin before your building is commissioned and continue throughout the life of your building.
