

Lutron® Commercial Startup Options

Lutron has made its newest systems easy to set up. Nonetheless, sometimes even experienced contractors have questions when setting up a Lutron lighting control system. Lutron now offers a variety of start-up plans to get you the level of support you need.

Telephone startup, prices starting at \$200*

Telephone startup is the best option for experienced contractors who are looking for additional support, but do not require onsite Lutron set up assistance.

Benefits:

- Lower price solution than onsite startup
- Shorter lead-time for service than onsite startup
- Gain experience for future projects with the help of a qualified Lutron phone startup technician
- 1-year parts warranty by default
(Quoted systems qualify for 2-year parts and diagnostic labor warranty with a completed end-user registration)

Onsite startup, prices starting at \$1000**

Onsite startup is ideal for contractors of any experience level who want to ensure that their Lutron system is set up by a qualified Lutron field service engineer.

Benefits:

- Enhanced 2-year full parts and diagnostic labor warranty
- End-user training provided by Lutron field service engineer
- Available for all Lutron systems

* See reverse side for pricing details on individual systems
