

Sustainable Fabric Offerings from Lutron Increase Design Options, Environmental Responsibility

—Environmentally friendly line features PVC-free construction—

Lutron Electronics Co., Inc. answers the increasing demand for environmentally-friendly, energy-saving and aesthetically-pleasing light control solutions with the introduction of new fabric options for its automated roller shade line.

In an effort to offer both stylish and sustainable options, many of the new fabrics are PVC-free. Many are GREENGUARD® and/or Oeko-Tex® Standard 100 certified, and a select number are made from recycled materials. Especially important in commercial applications, all new additions are fire-rated.

With the addition of these new fabrics, Lutron now offers an even wider variety of designs, colors and textures to personalize any space. The new offerings include:

- Metallic sheers – a new category that complements finishes in a room with silver, gold, or copper weaves;
- Sculpted – fiber-etching removes fibers from the fabric to create unique patterns ranging from whimsical to geometric;
- Texture – adds depth to a space with simple or complex weaves;
- Translucent – reduces the view to shapes and shadows in a saturated palette of linen materials; and
- Basketweave Silver – a new, dual-sided fabric with aluminum backing allows for greater energy savings by reflecting more daylight while still maintaining outside views.

About Lutron Electronics Co., Inc.

Lutron Electronics Co., Inc., headquartered in Coopersburg, Pa., is the world leader in the design and manufacture of light control solutions for both residential and commercial applications. The company offers a wide variety of lighting controls, whole-home and whole-building dimming systems, and electronically controlled shading solutions. Lutron products save energy, increase space flexibility, and enhance occupant comfort and productivity, making them essential to any home and building. For more information, view www.lutron.com.
